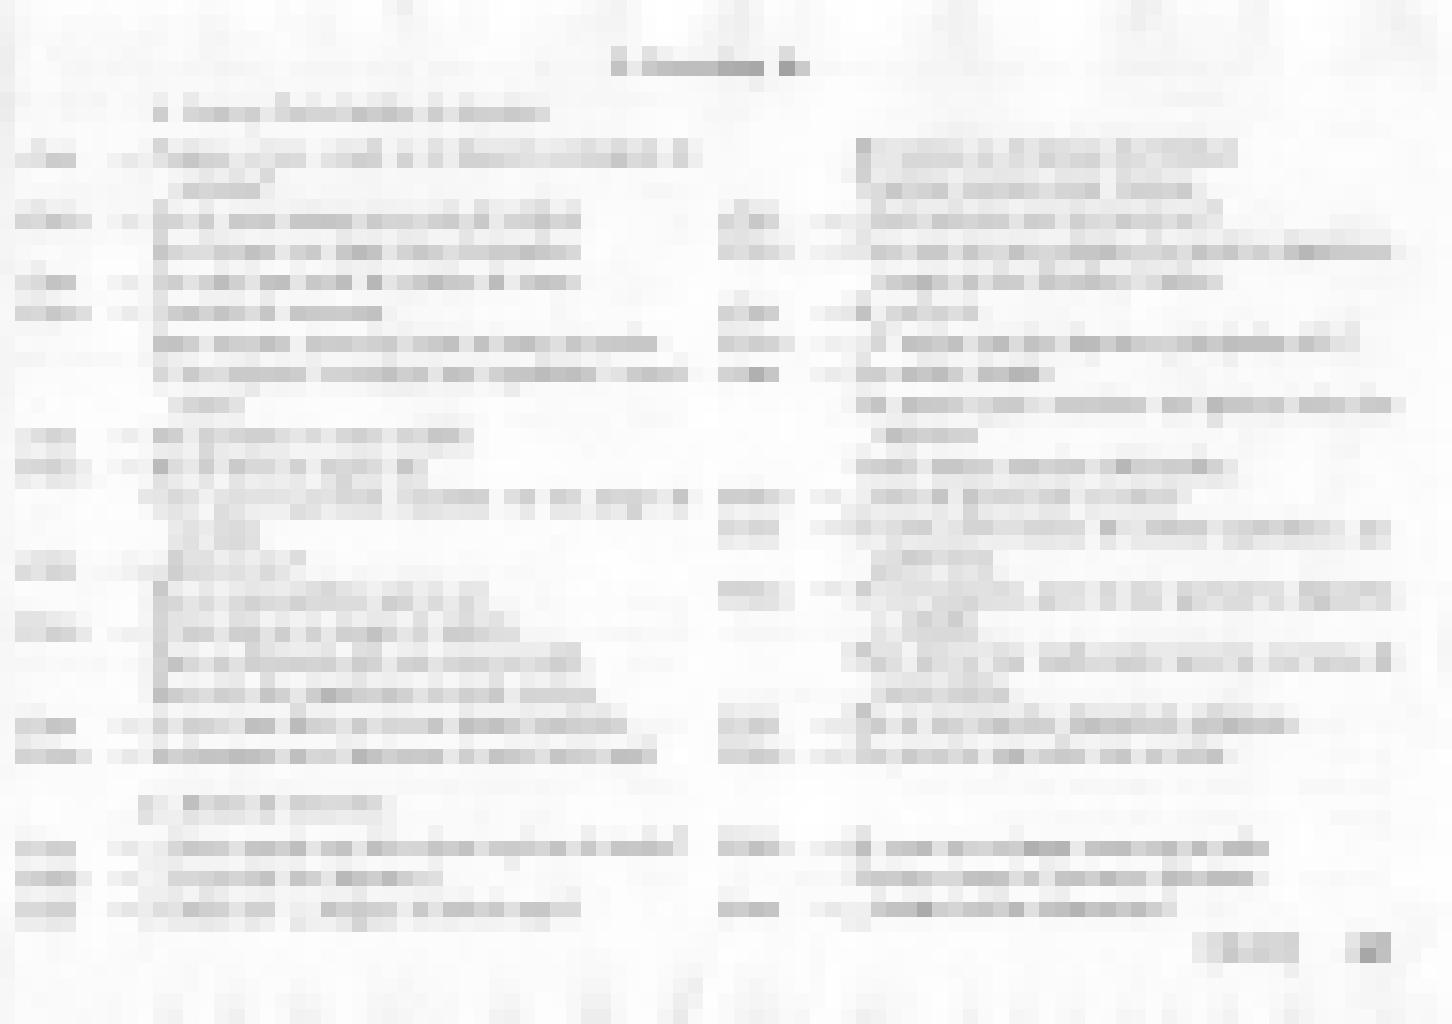

Figure 1. The effect of the number of hidden neurons on the performance of the neural network.

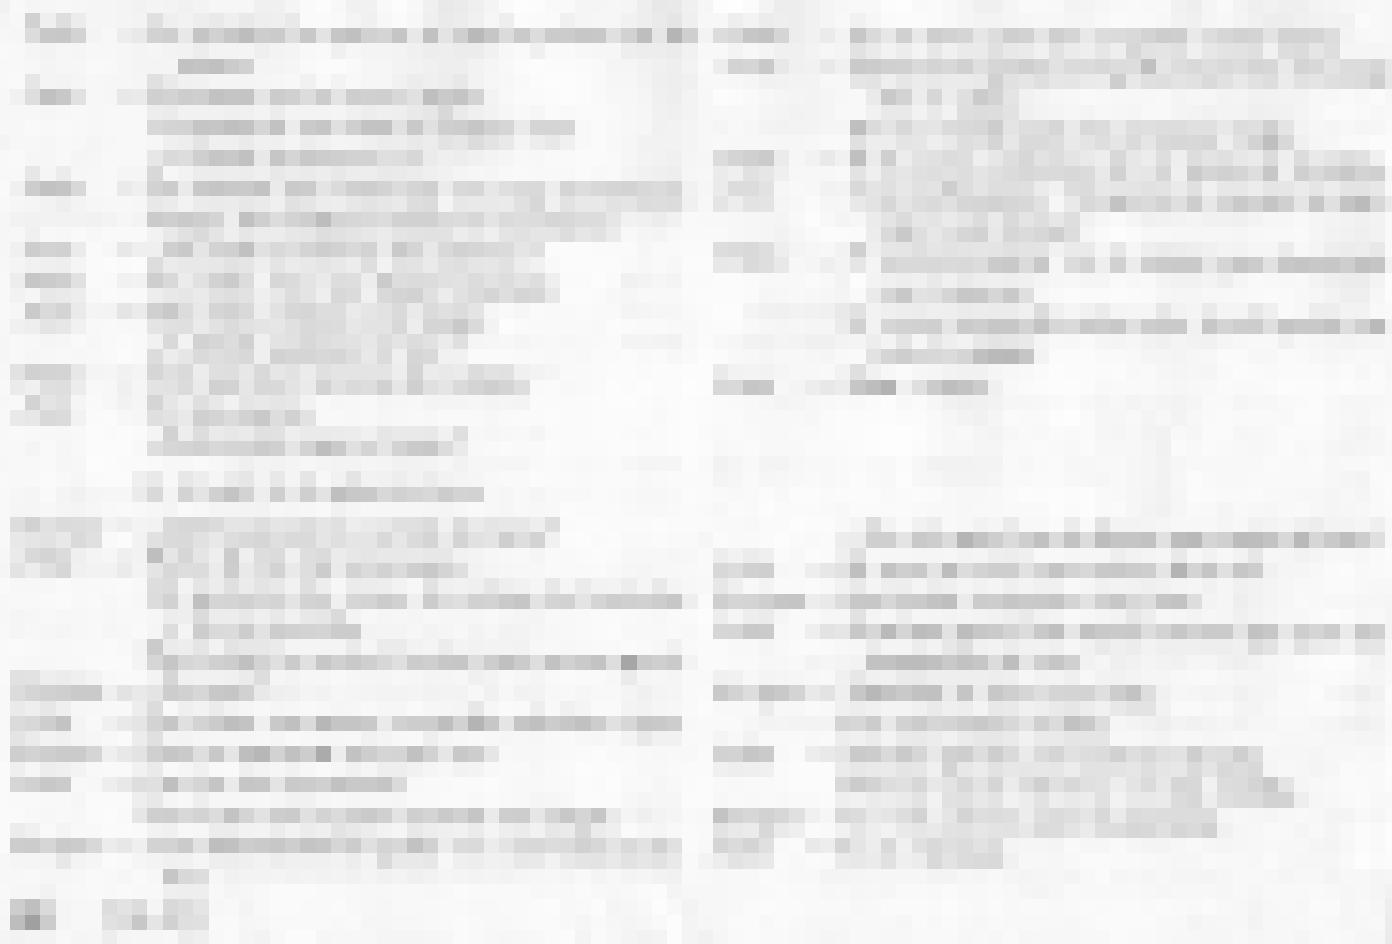

For more information, contact the Office of the Vice President for Research and the Office of the Vice President for Student Affairs.

A horizontal bar composed of a sequence of colored squares, transitioning from light gray to dark gray and back to light gray.

11. *What is the primary purpose of the following statement?*

A horizontal grayscale bar with a pixelated pattern, consisting of two distinct segments: a lighter segment on the left and a darker segment on the right.

Final Test Questions

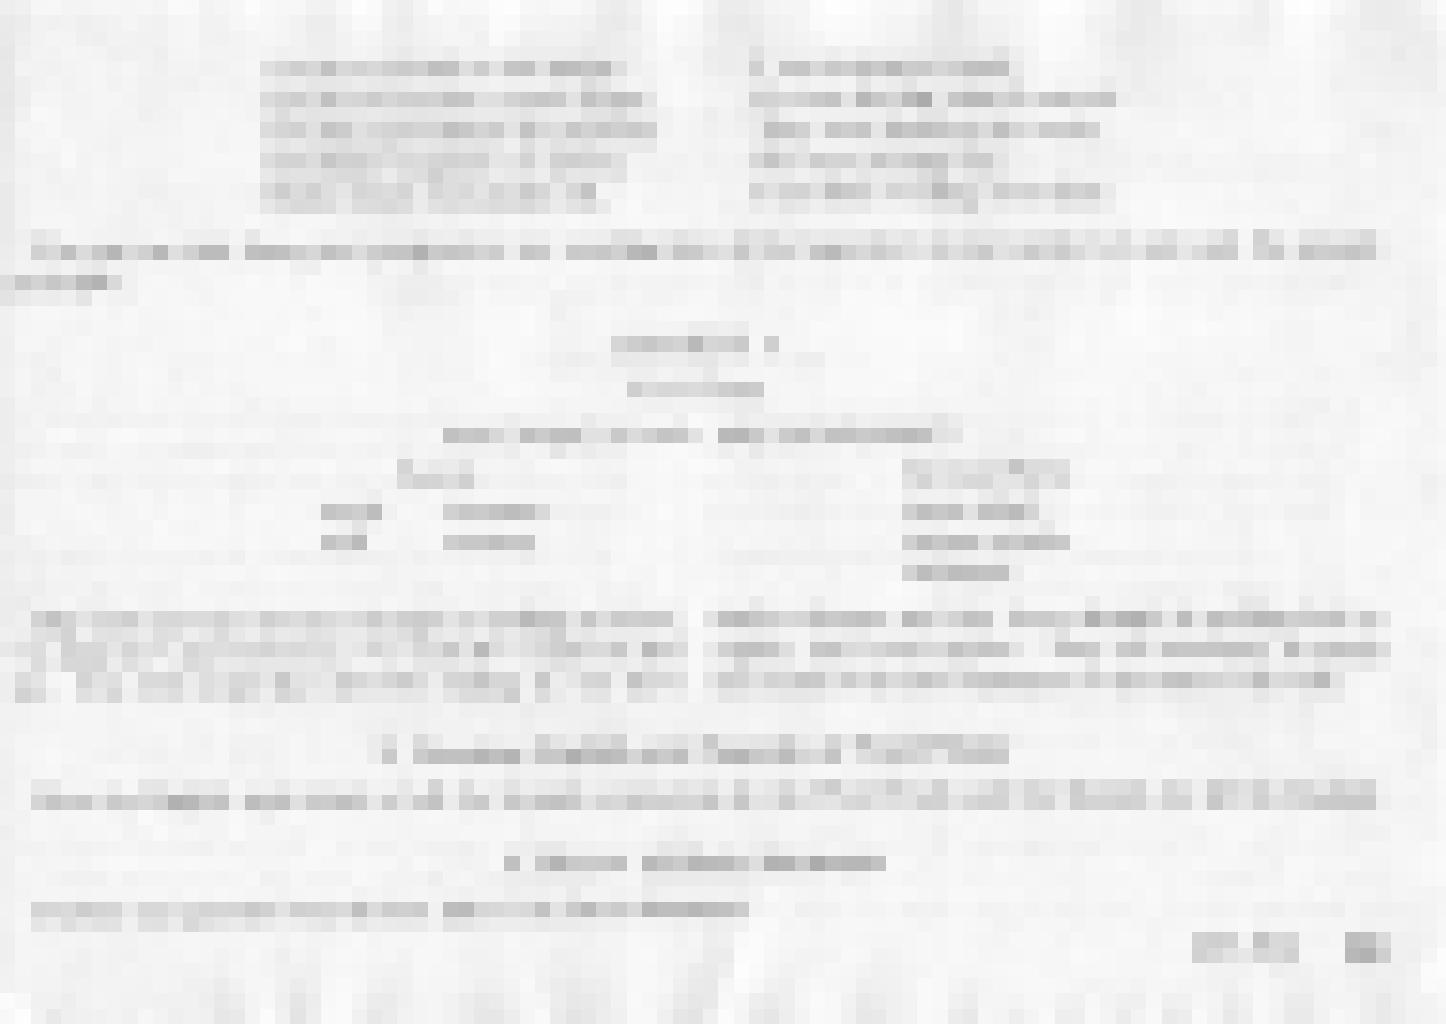

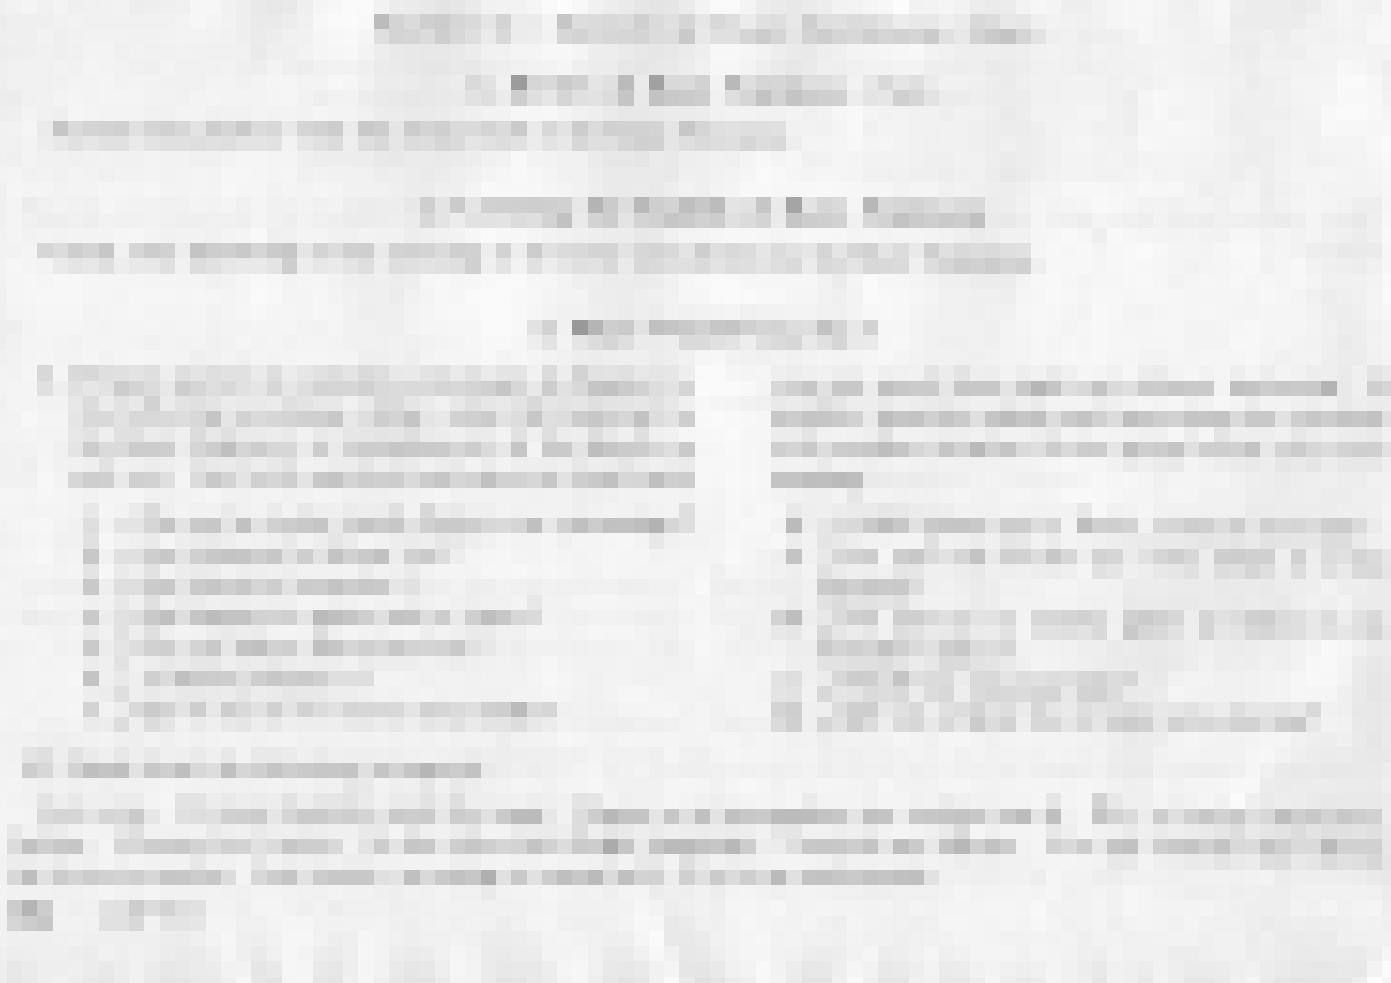

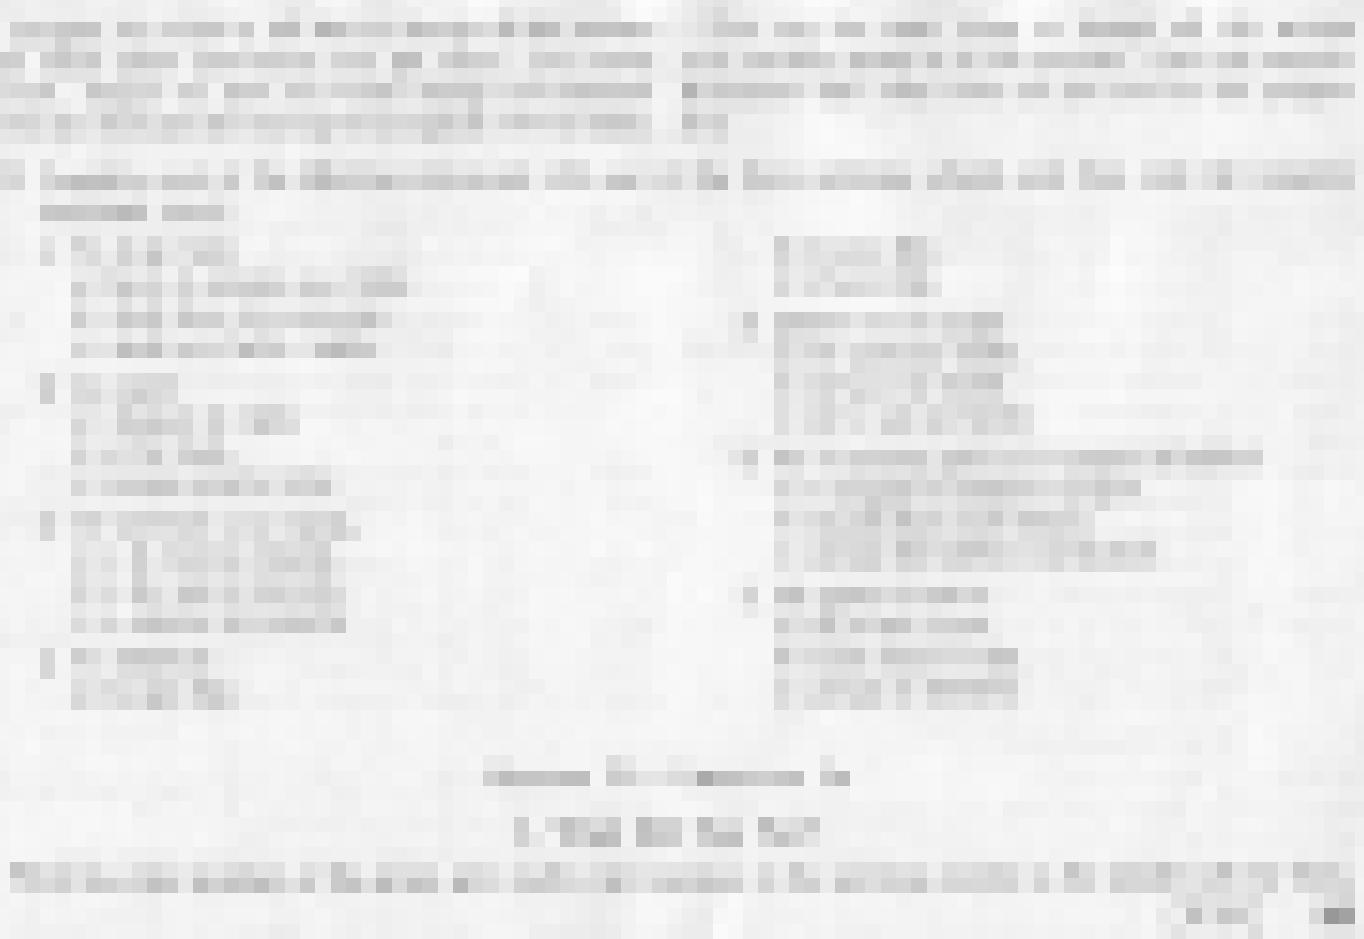

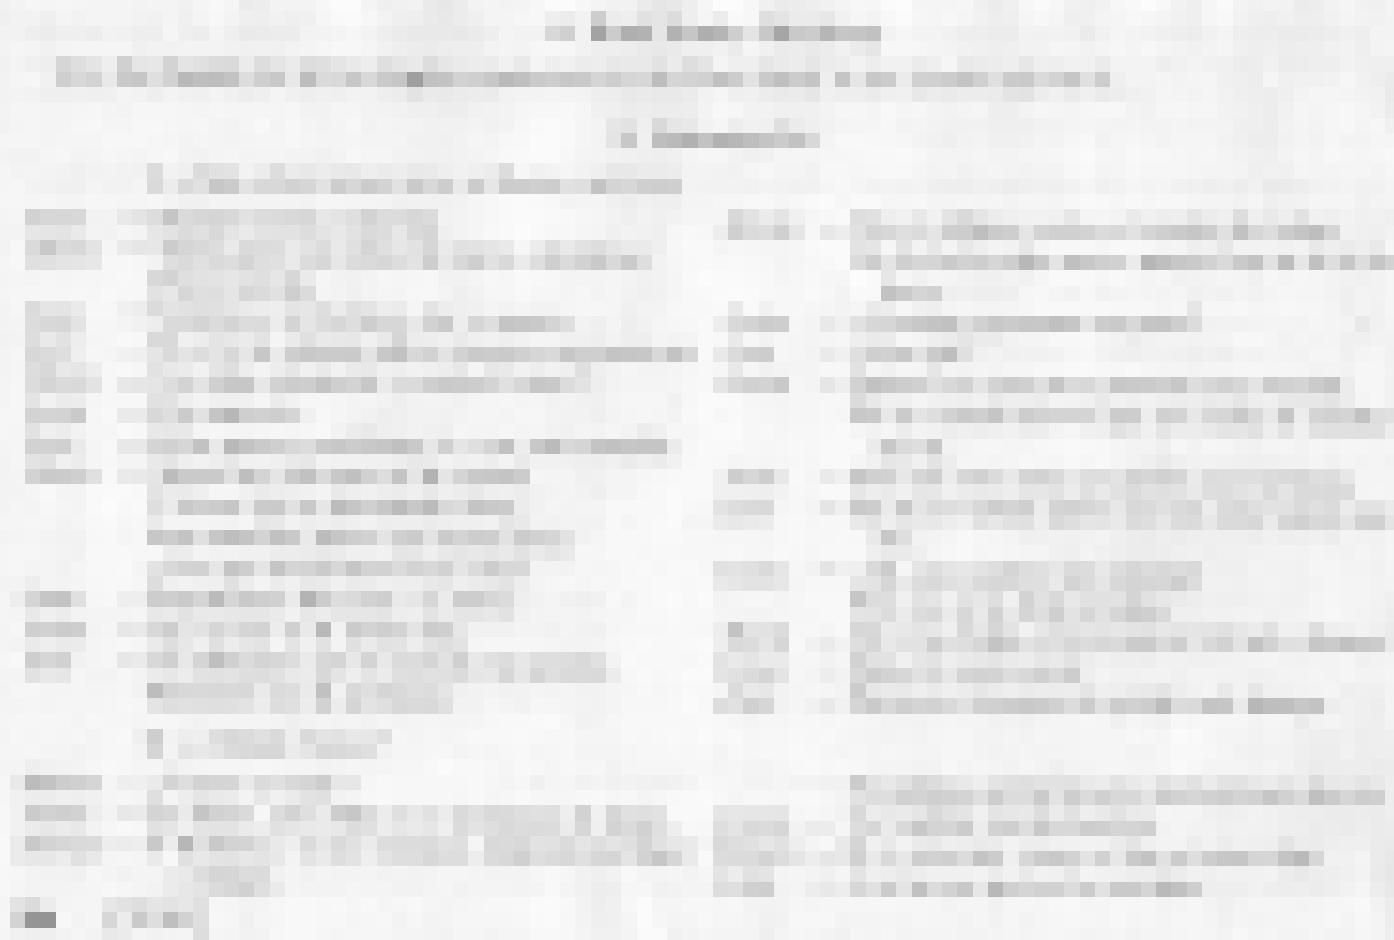

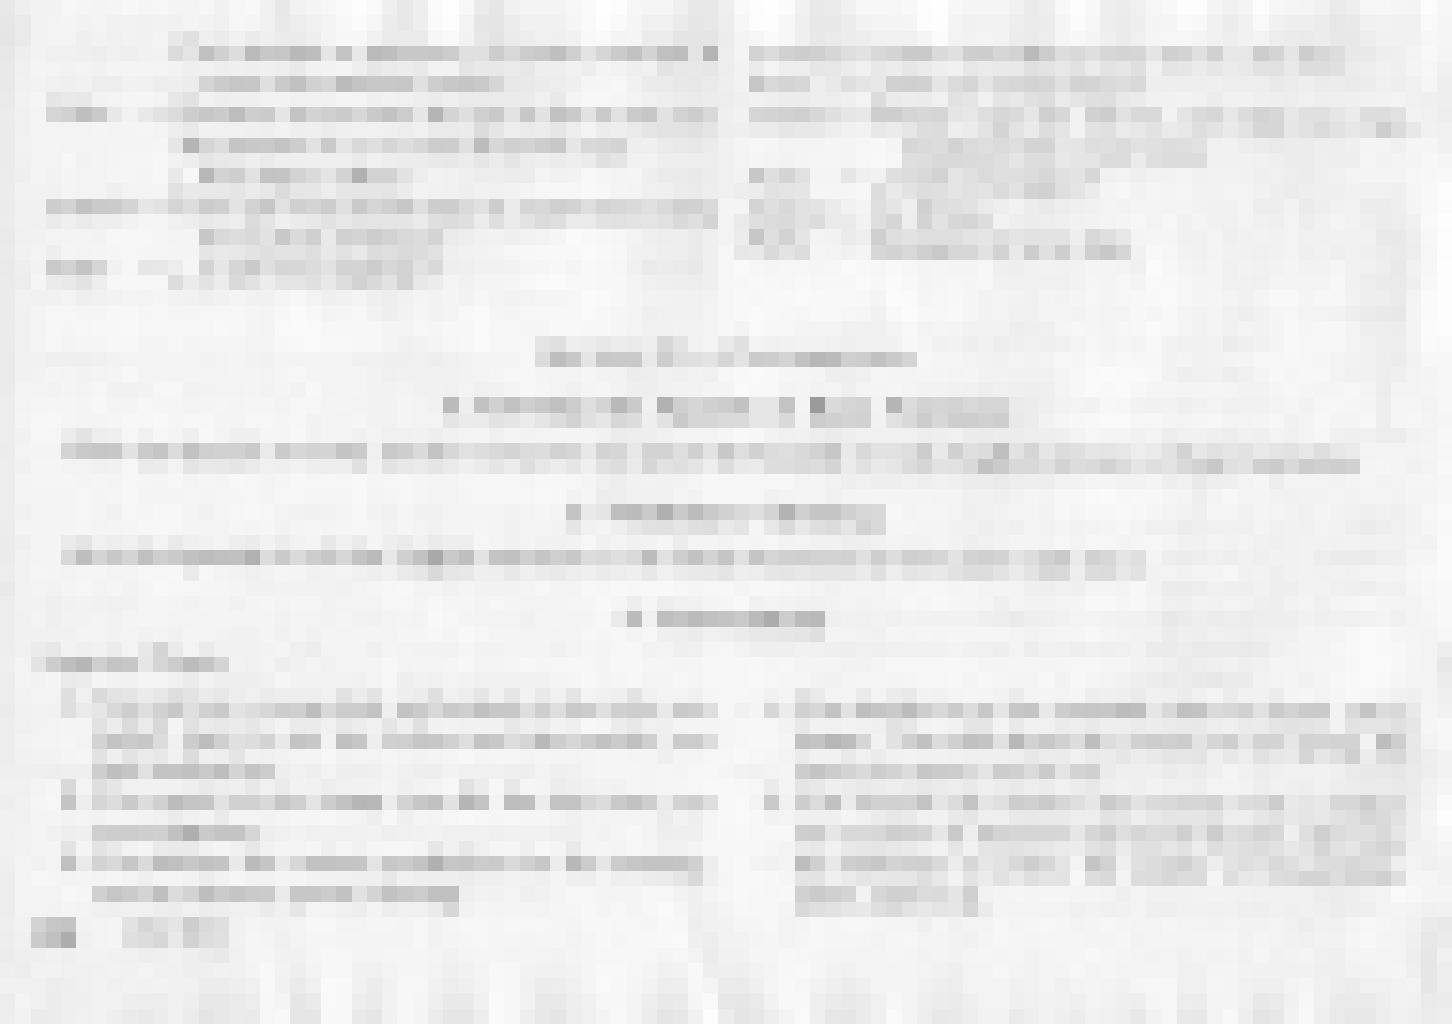

UNIVERSITY OF TORONTO LIBRARY

UNIVERSITY OF TORONTO LIBRARY

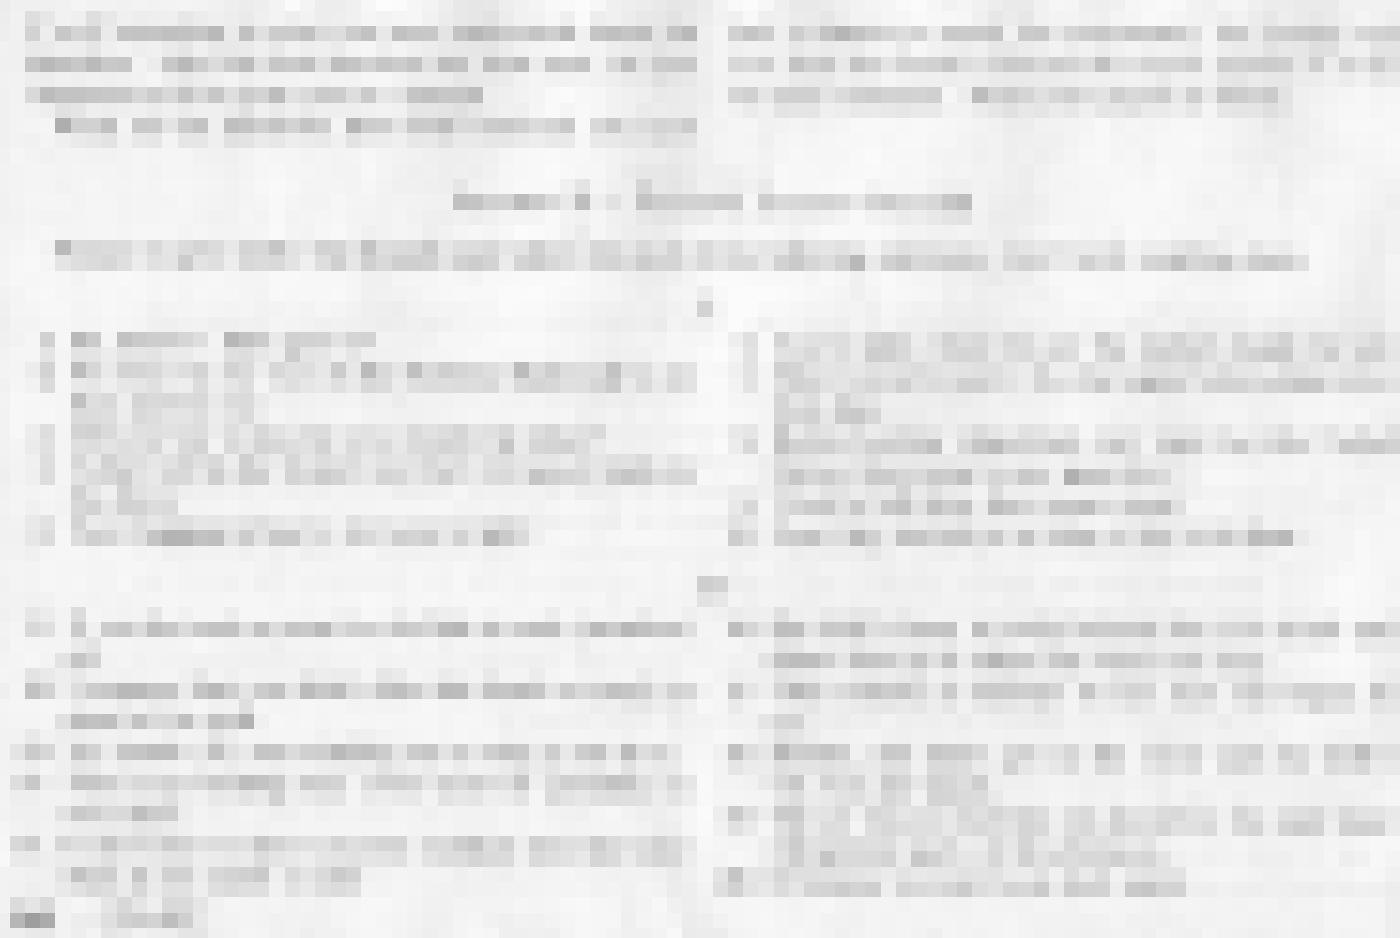

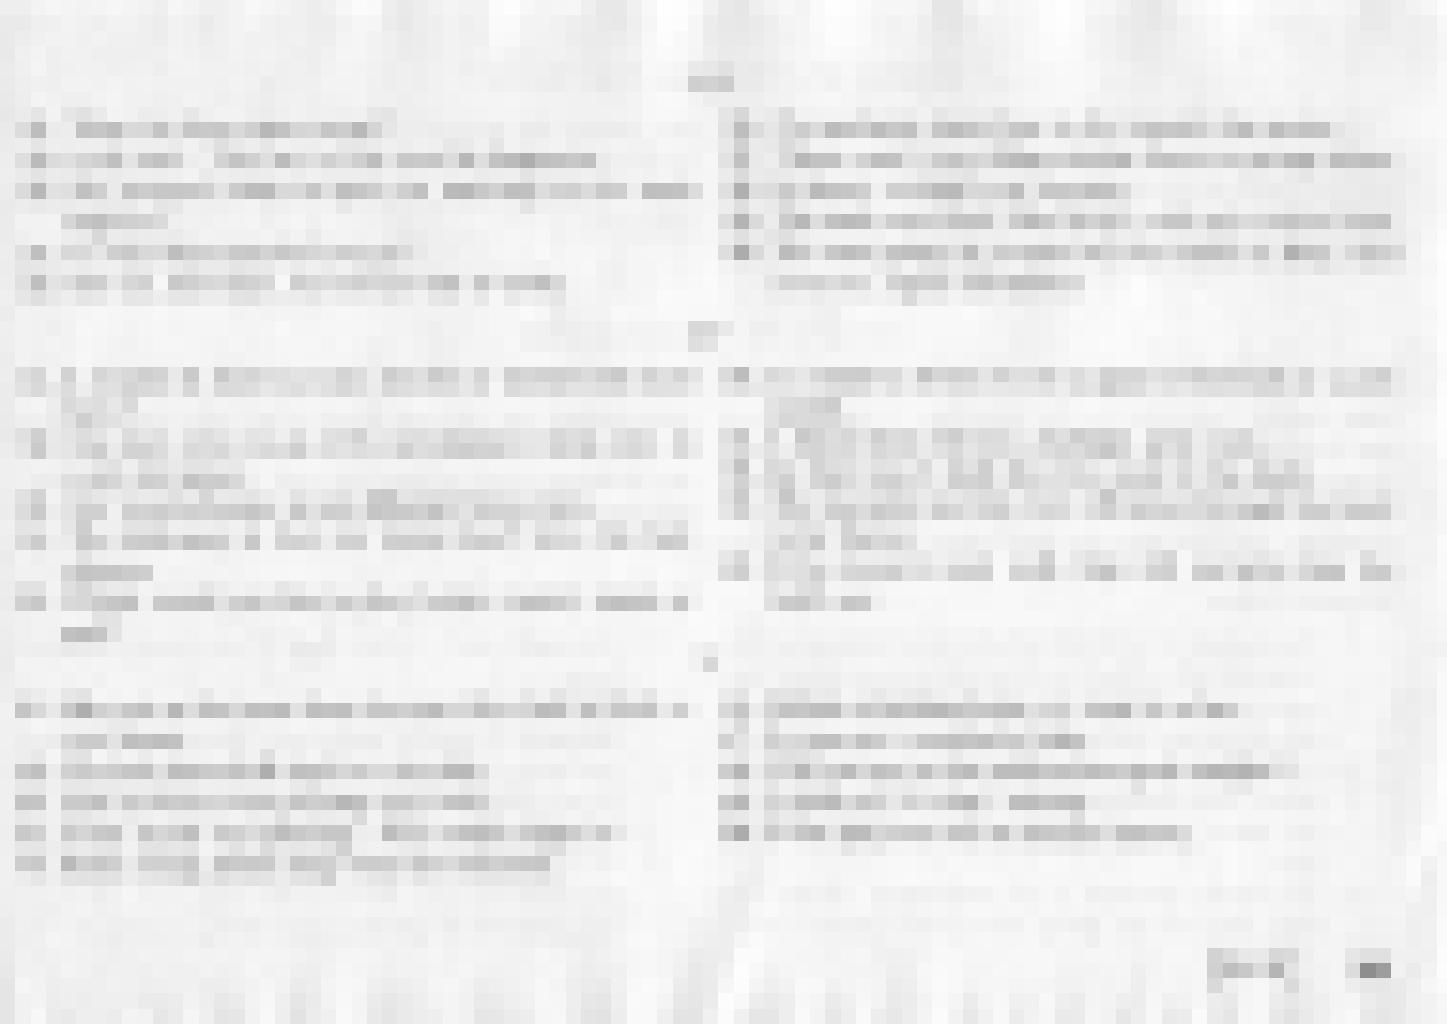

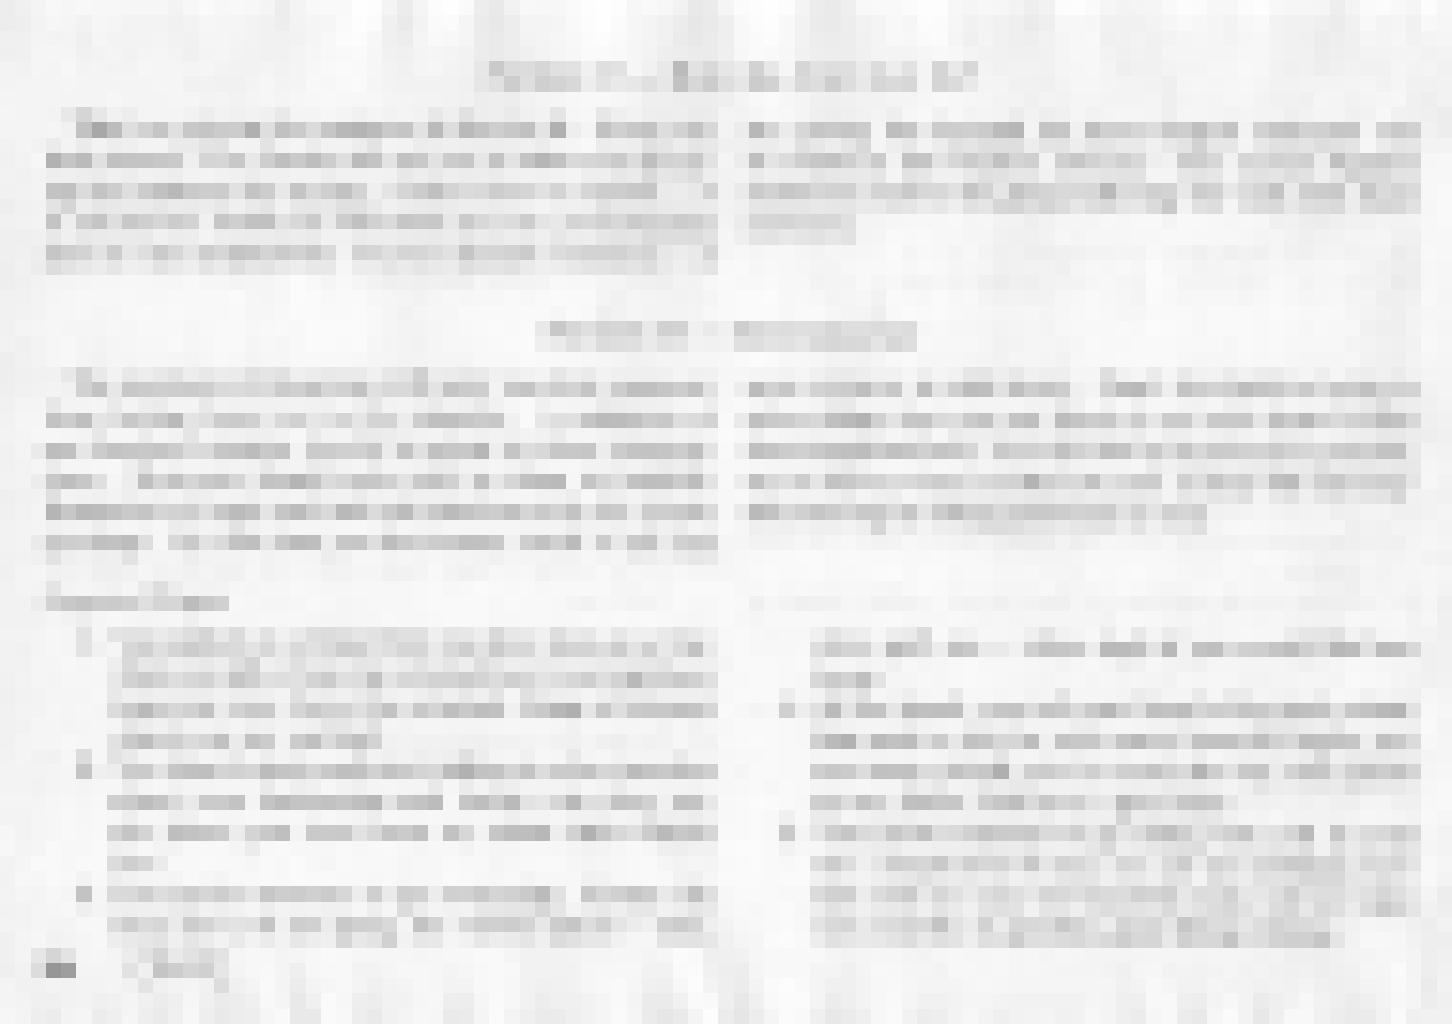

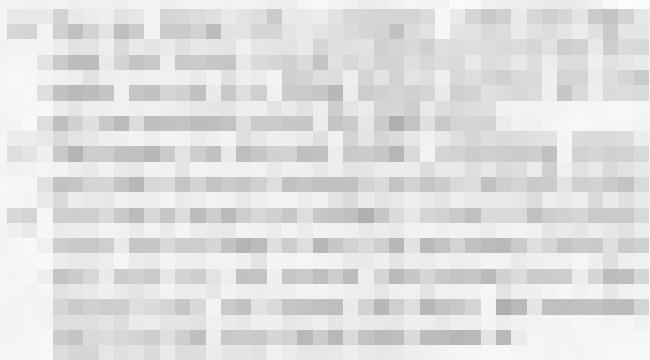

1. *What is the primary purpose of the study?* The primary purpose of this study is to evaluate the effectiveness of a new treatment for depression. The study is a randomized controlled trial (RCT) comparing the new treatment to a standard treatment. The study is being conducted at a single site and will last for 12 weeks.

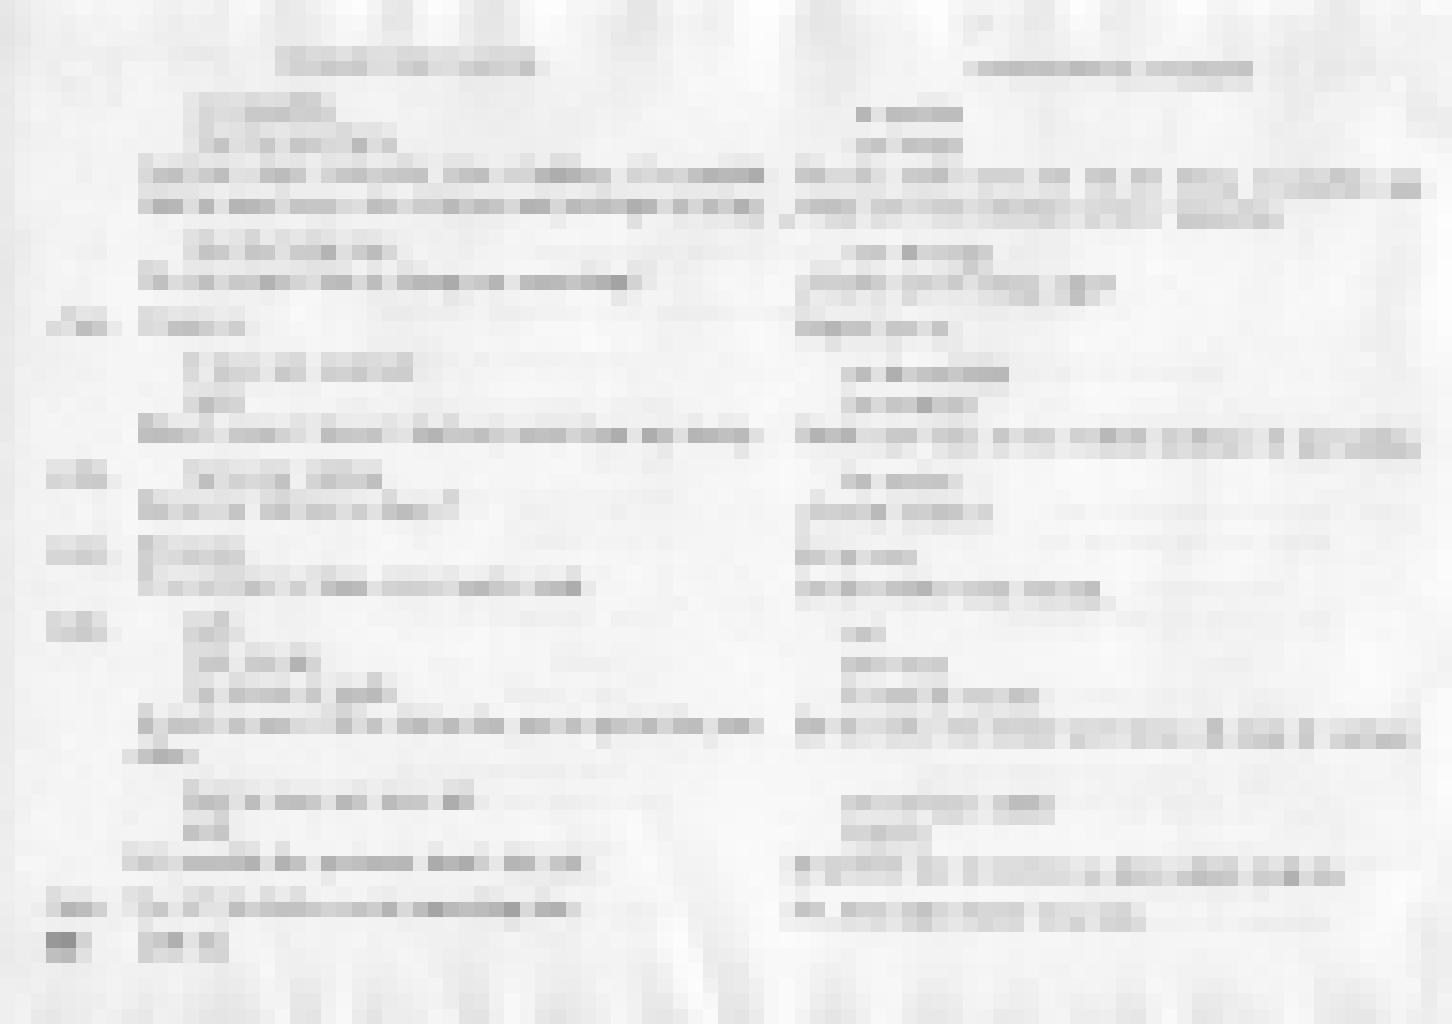

1. *Leucania* *luteola* (Hufnagel) (Fig. 1)

...and the following image is a 16x16 pixel grayscale image.

1. *What is the primary purpose of the study?*

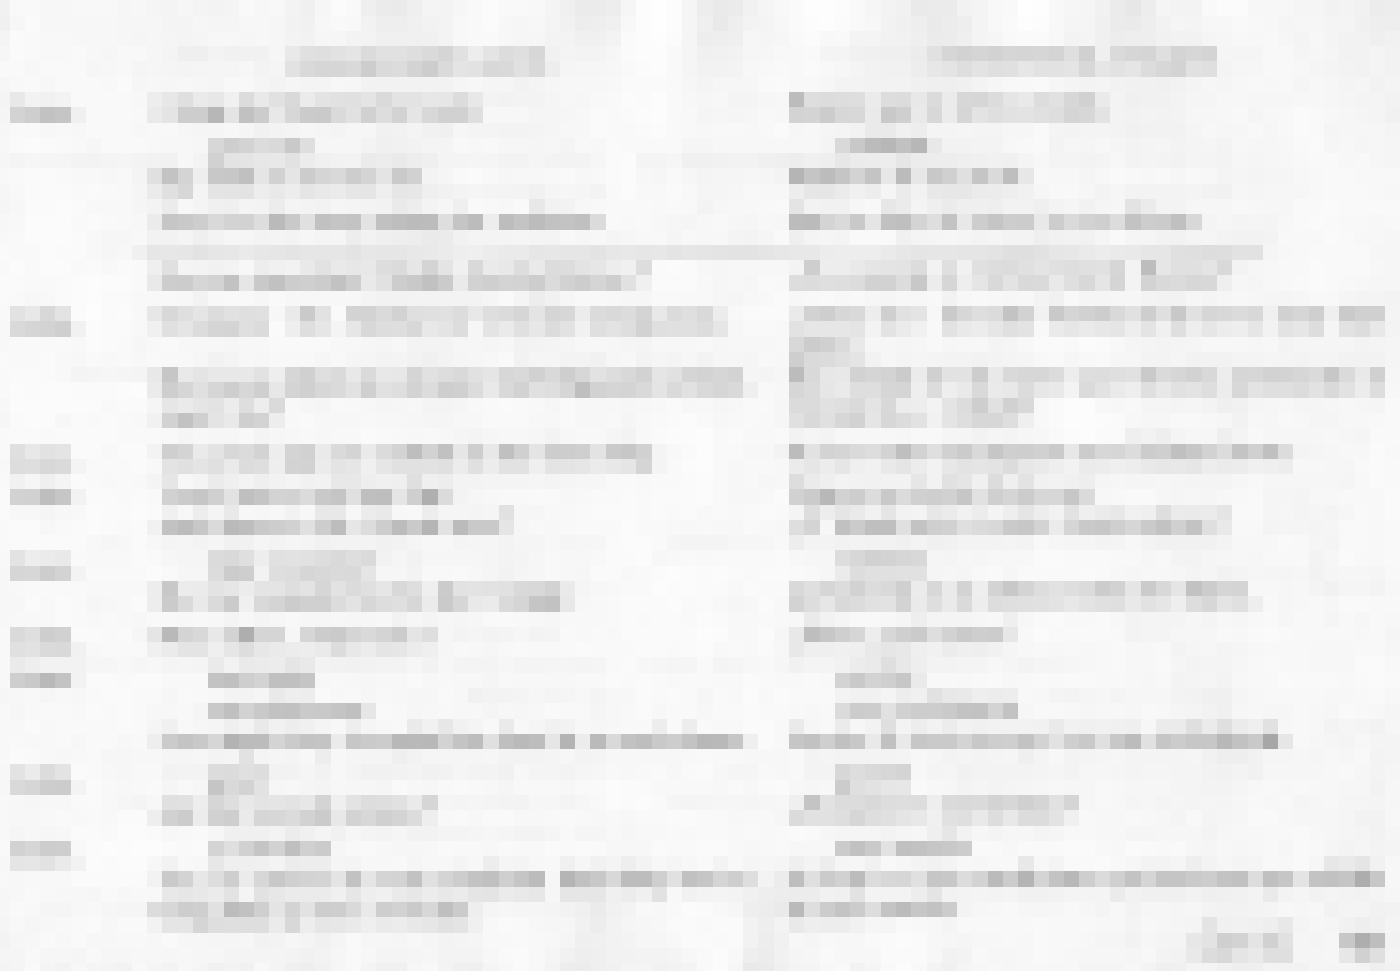

11. **What is the primary purpose of the `get` method in the `HttpURLConnection` class?**

11. [View Details](#) | [Edit](#) | [Delete](#) | [Print](#)

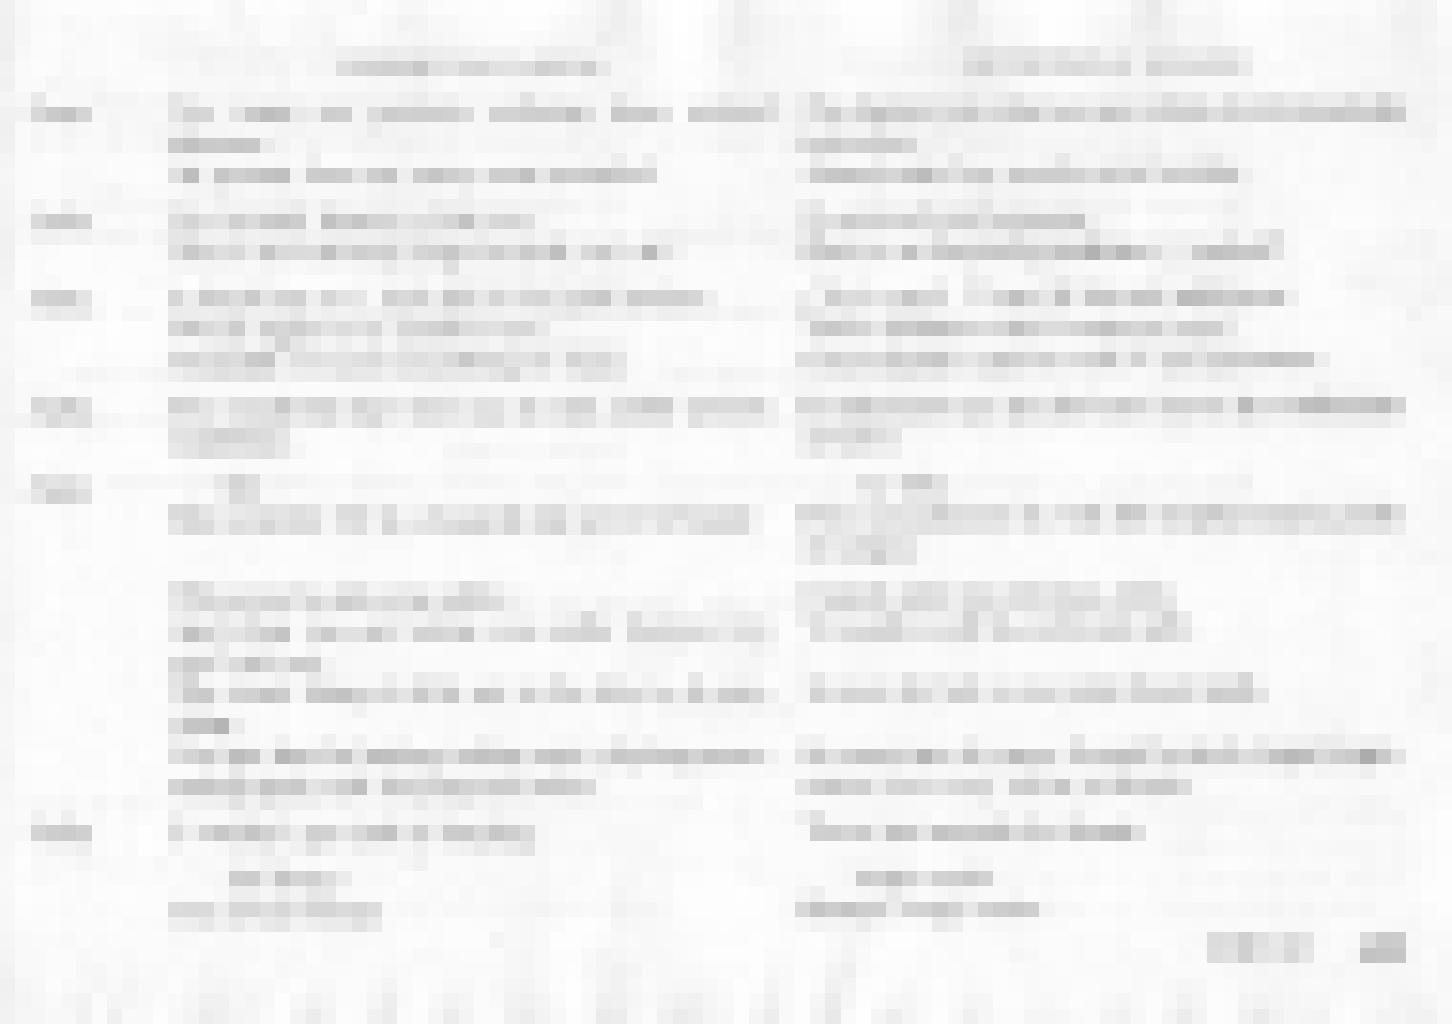

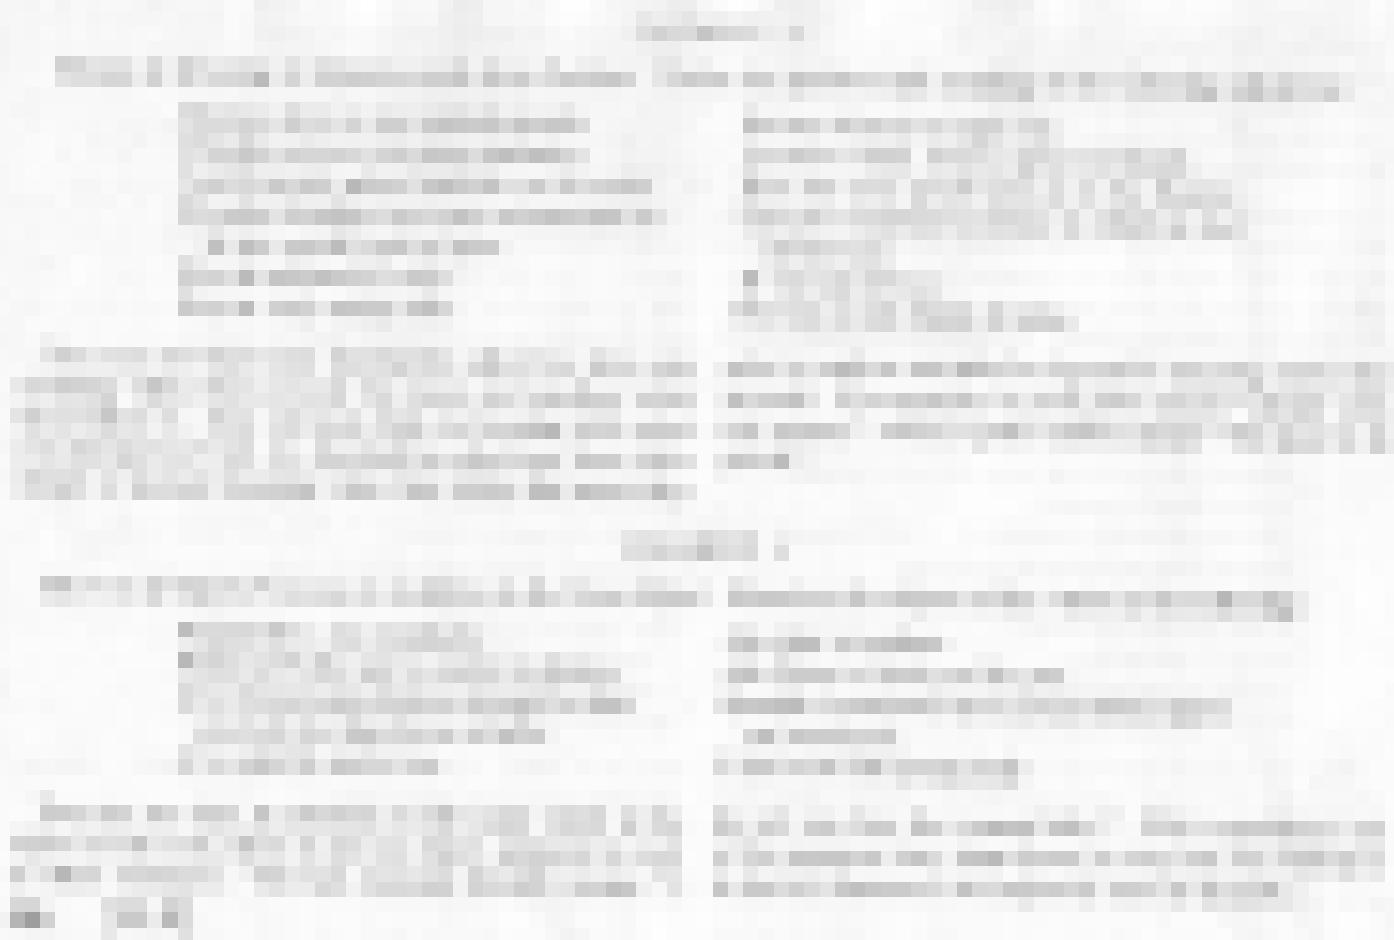

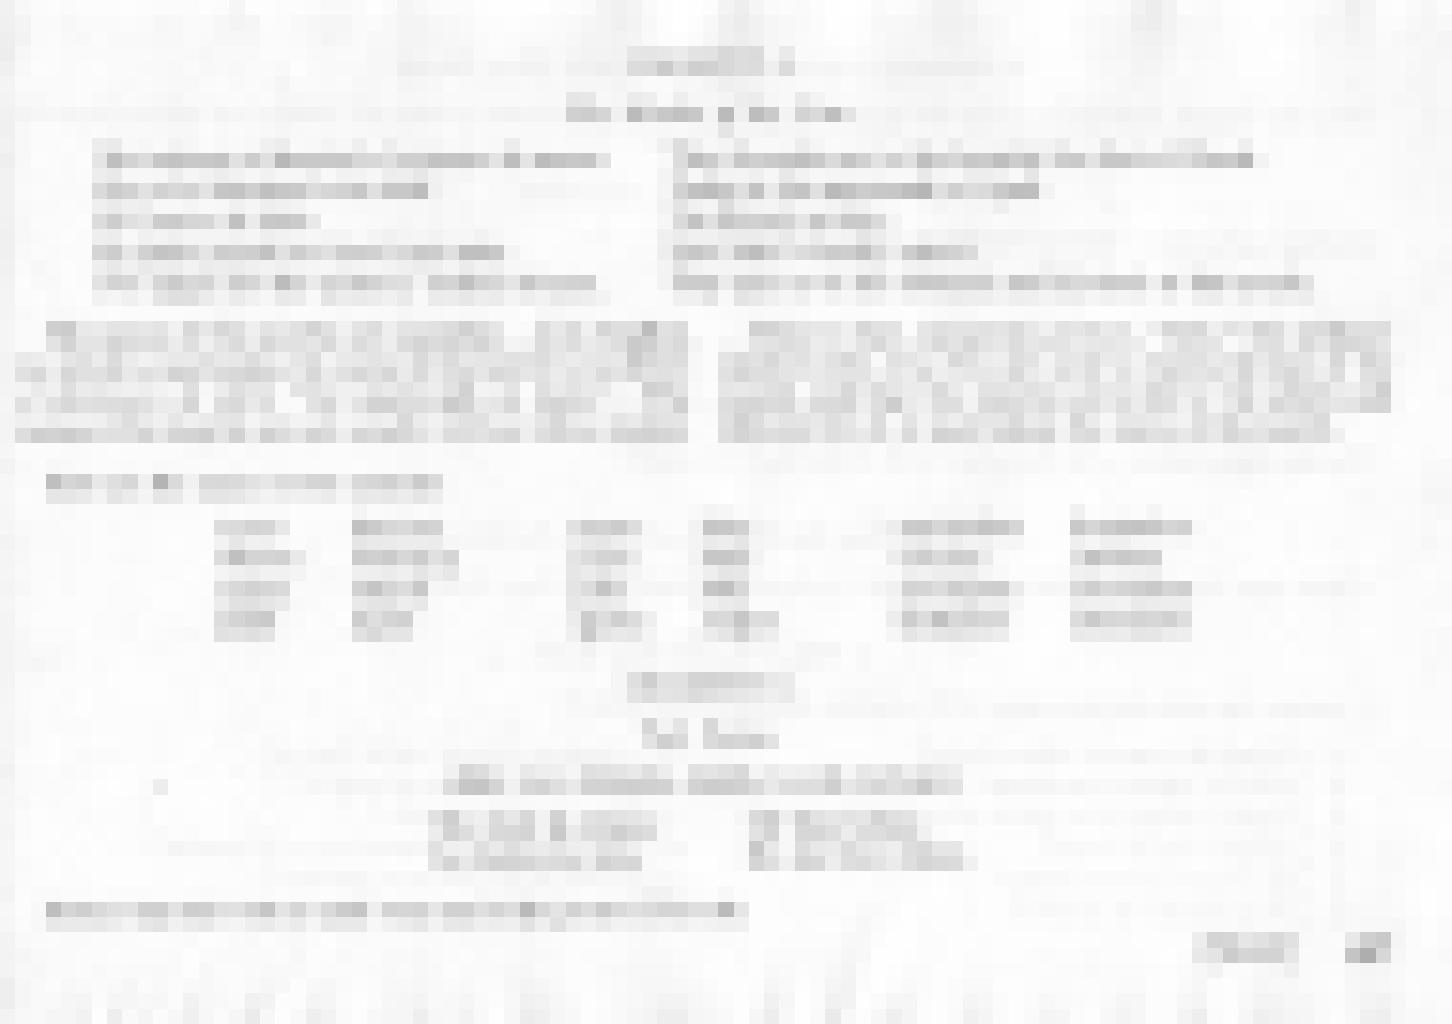

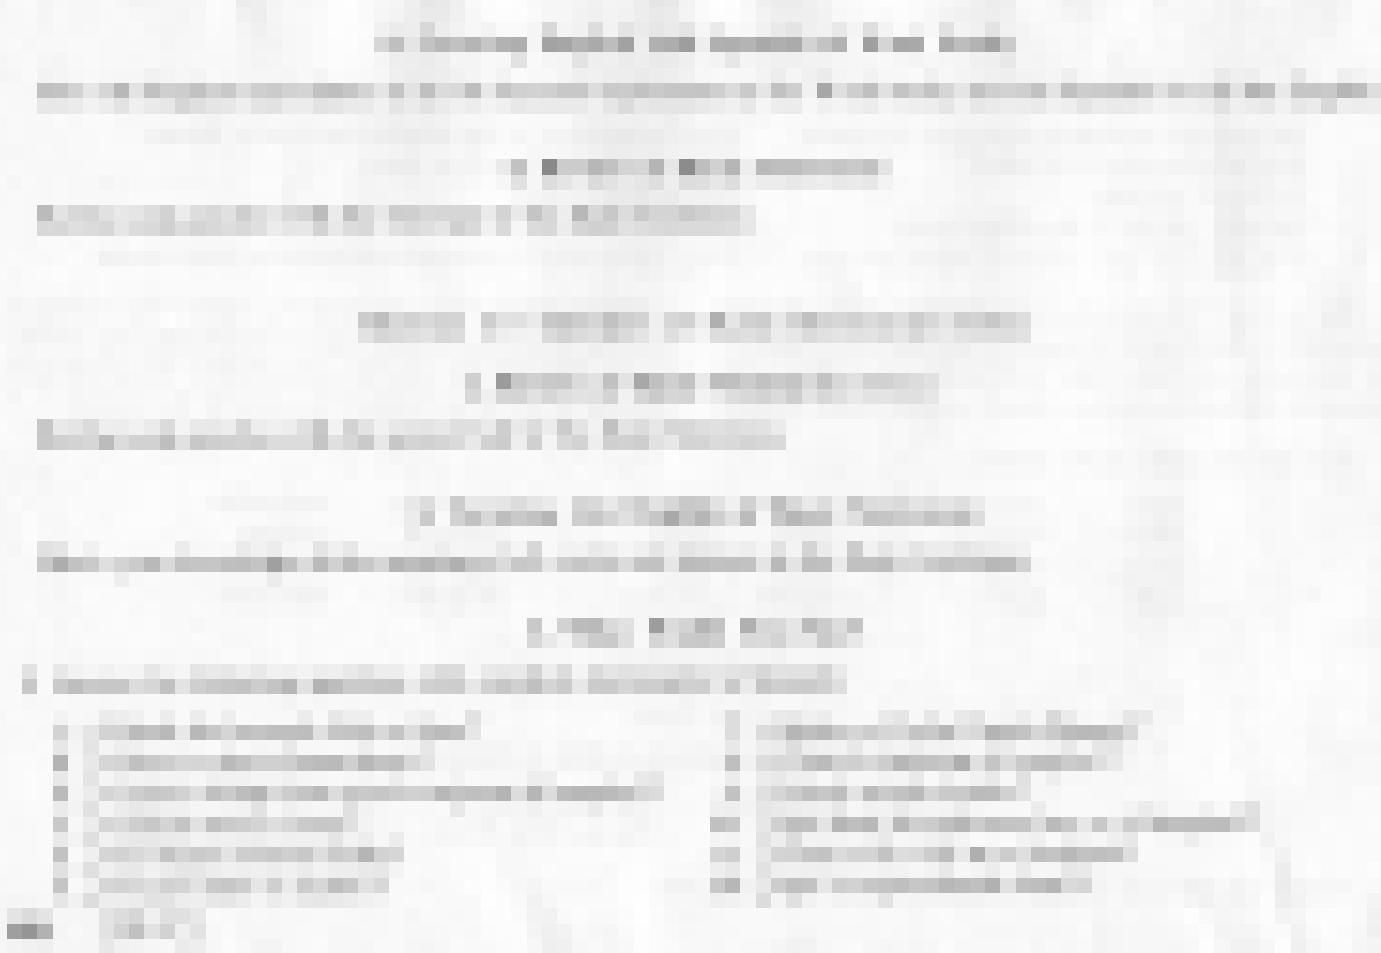

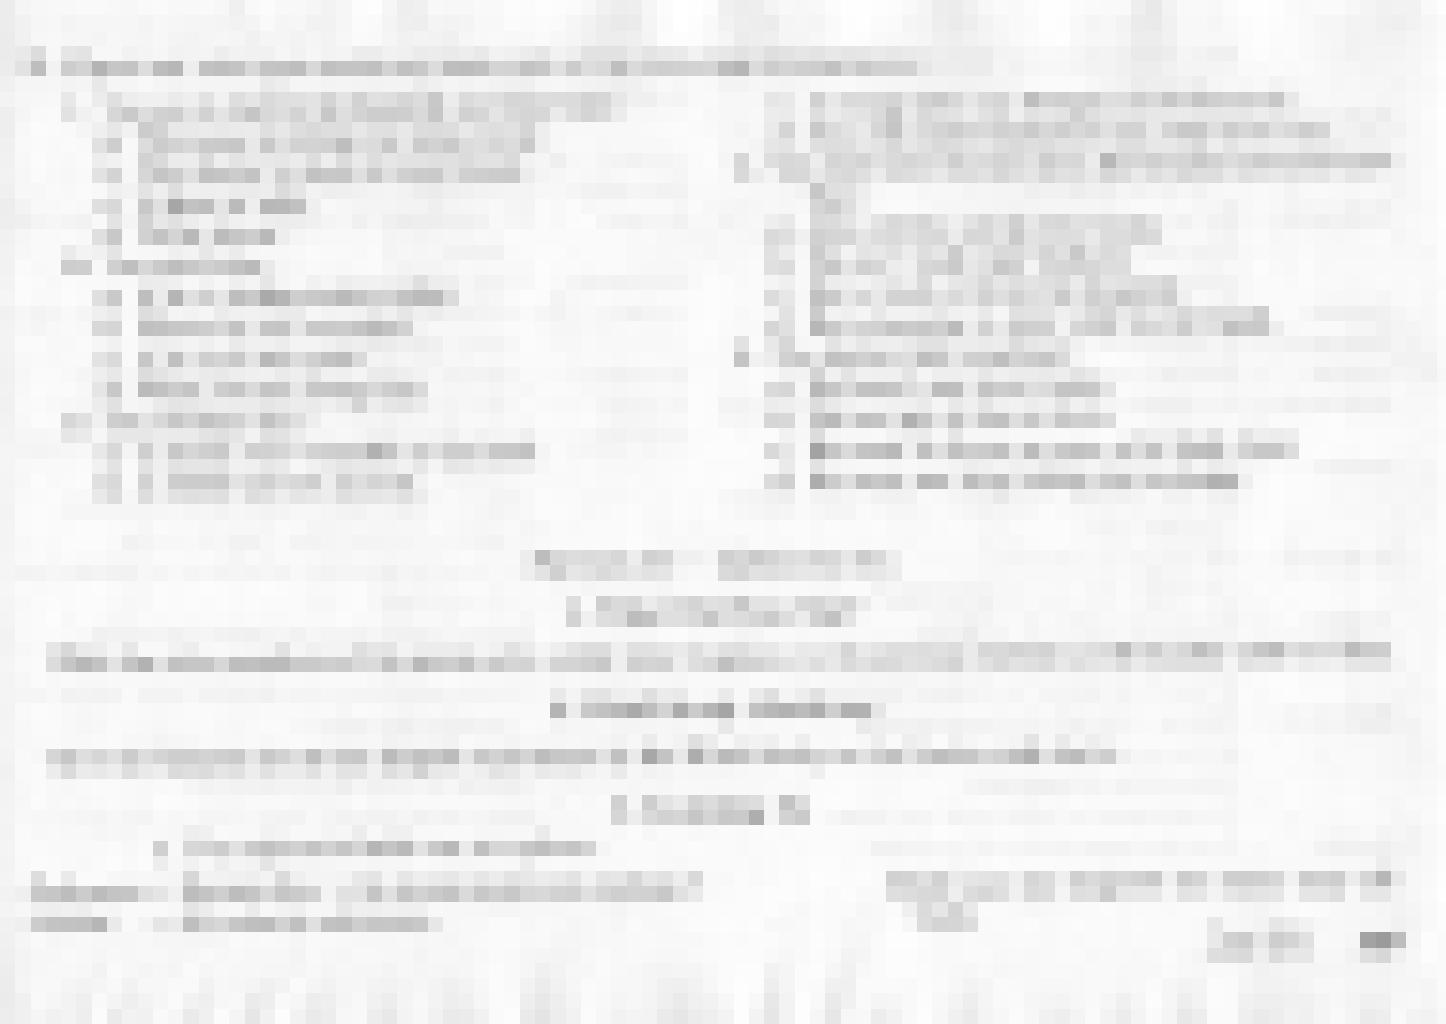

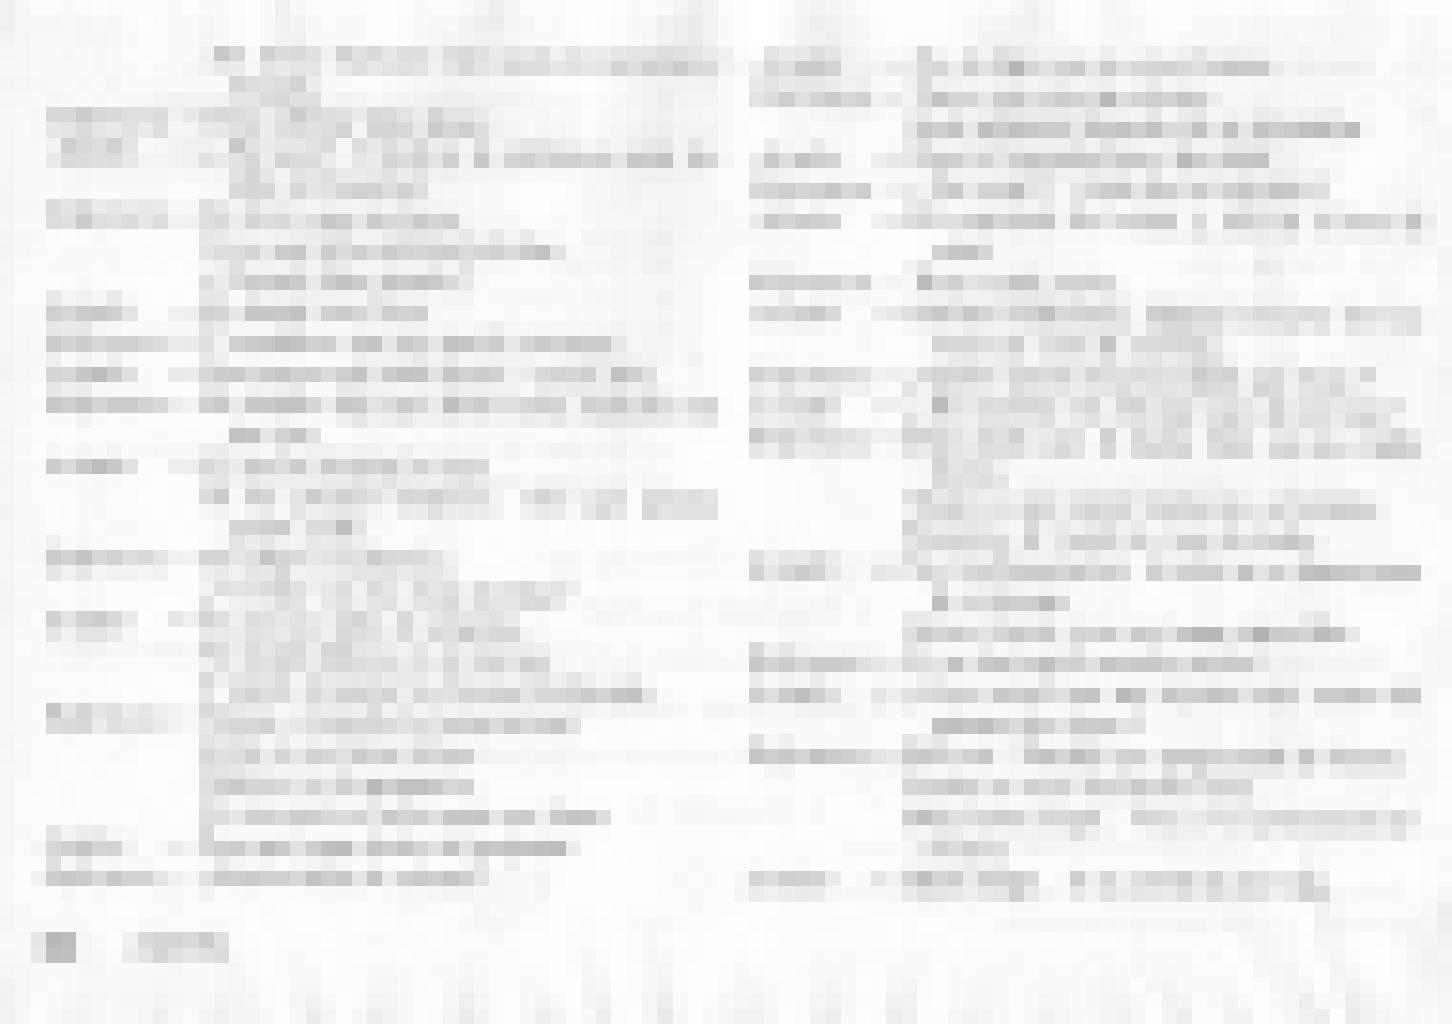

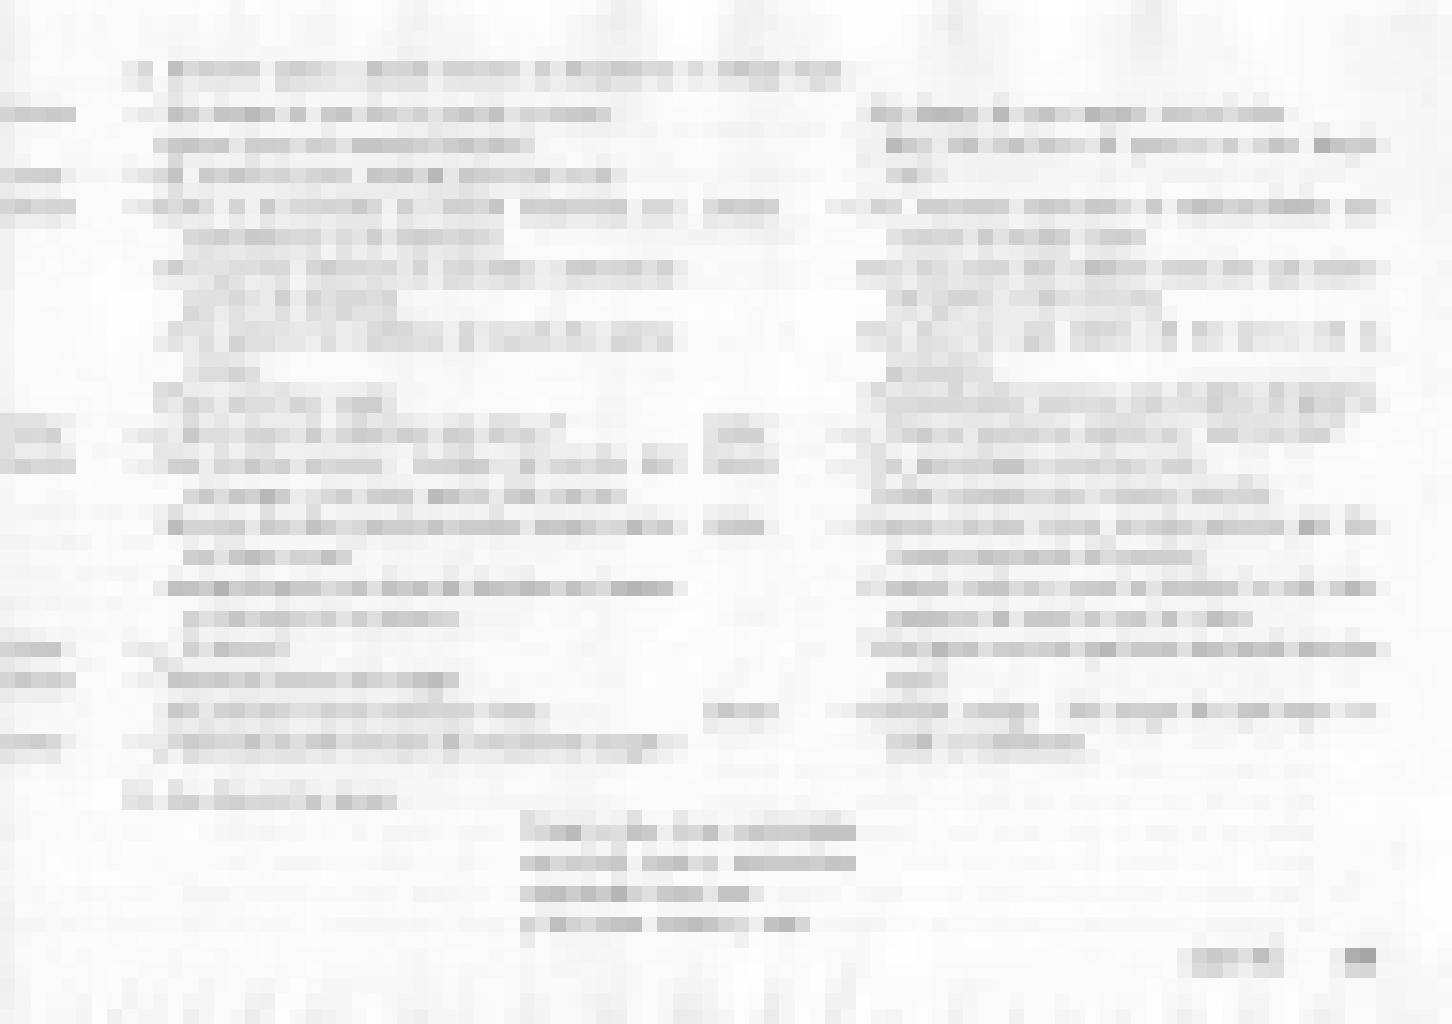

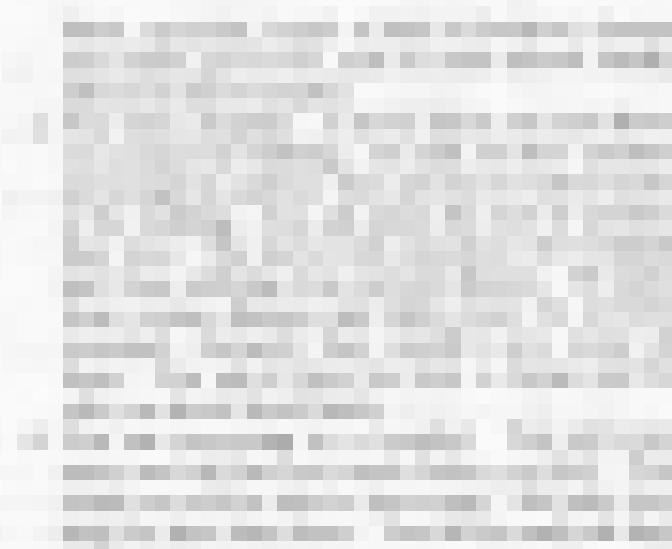

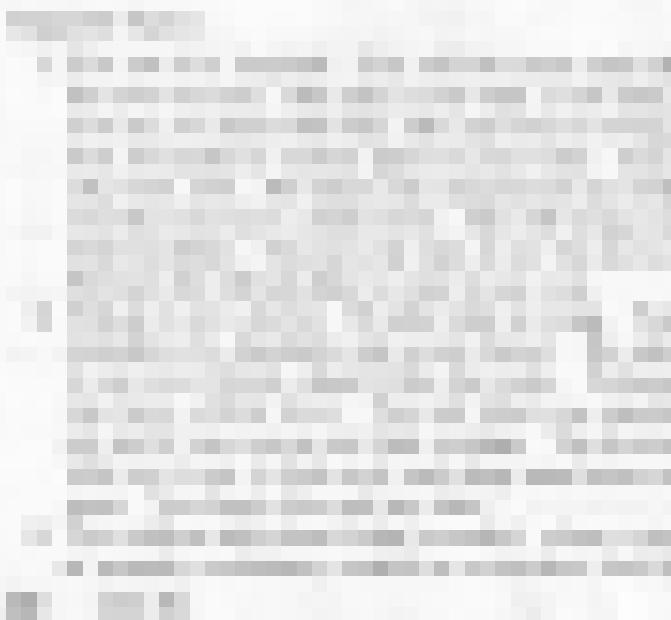

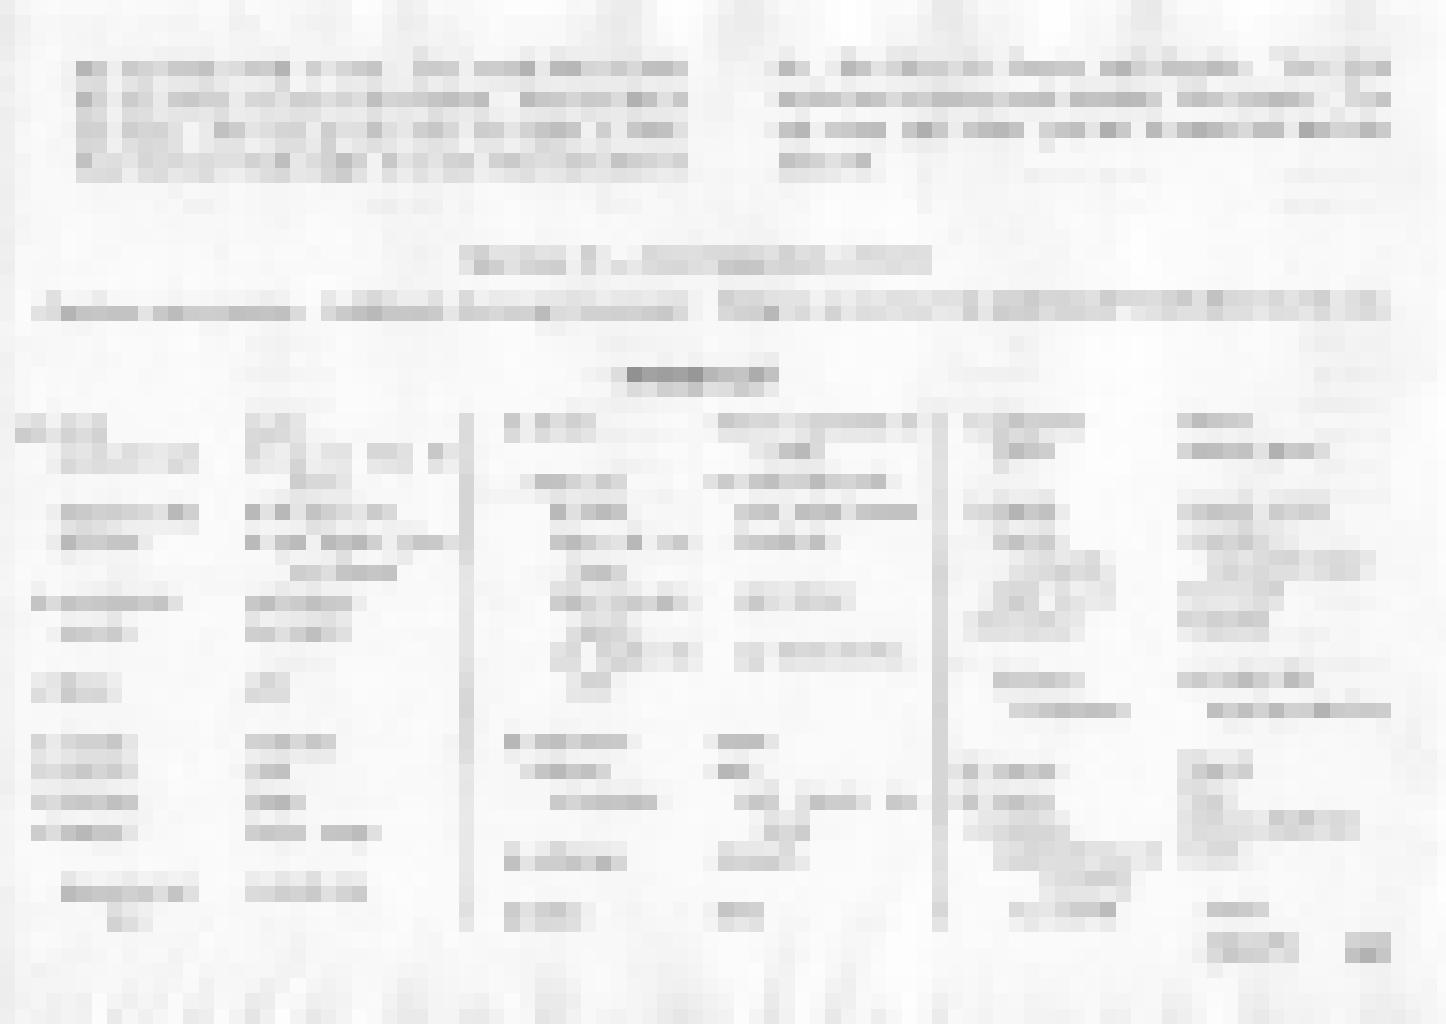

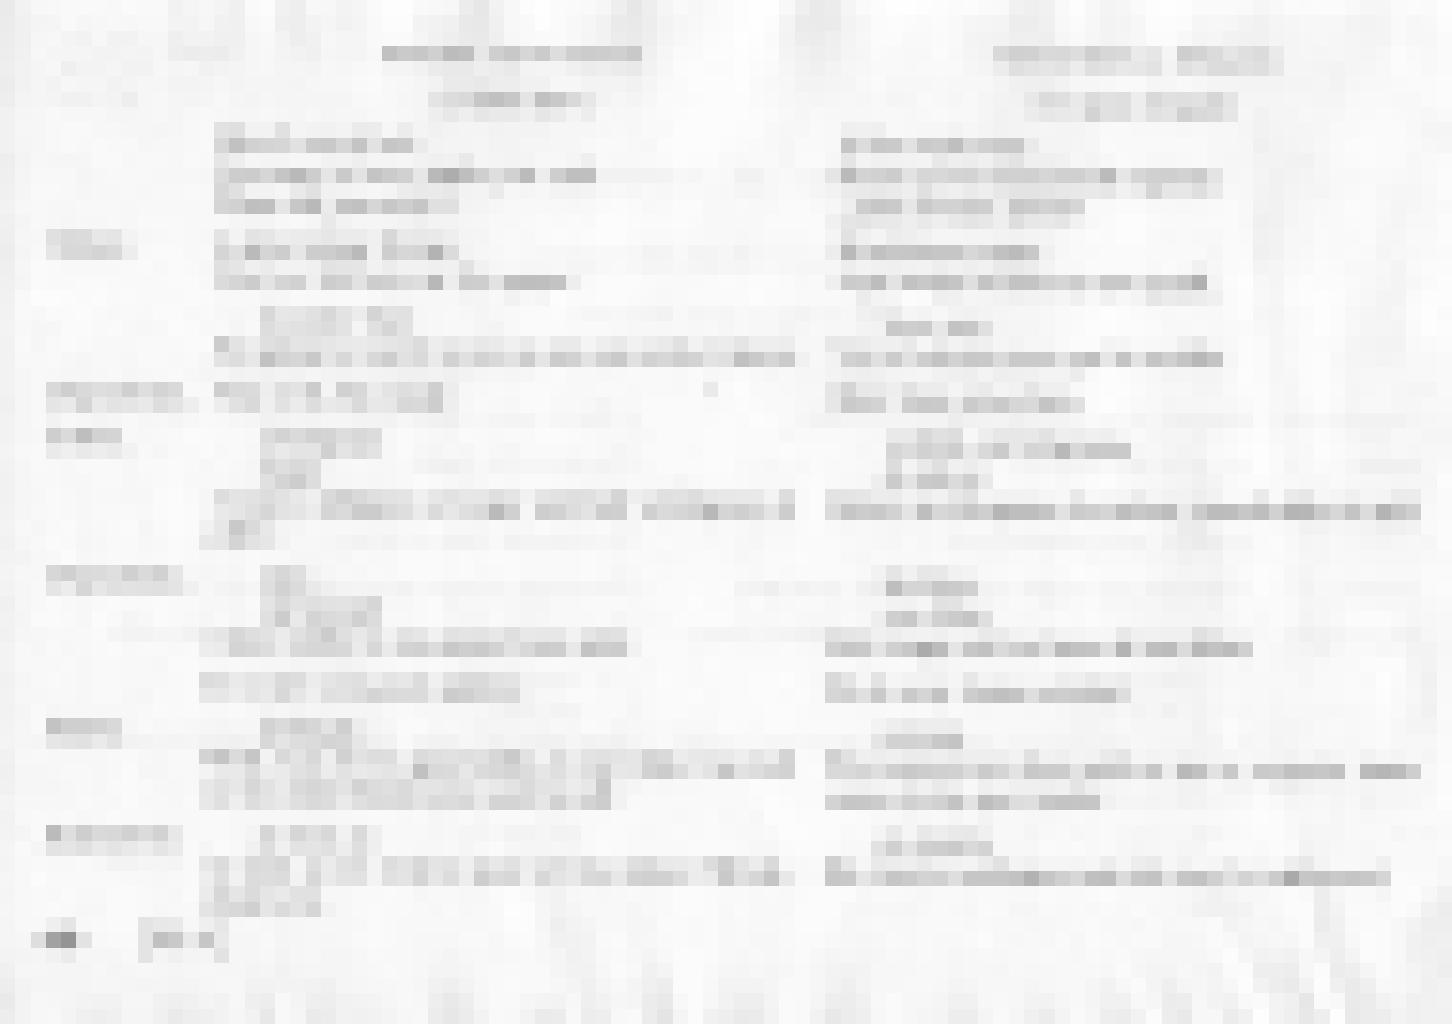

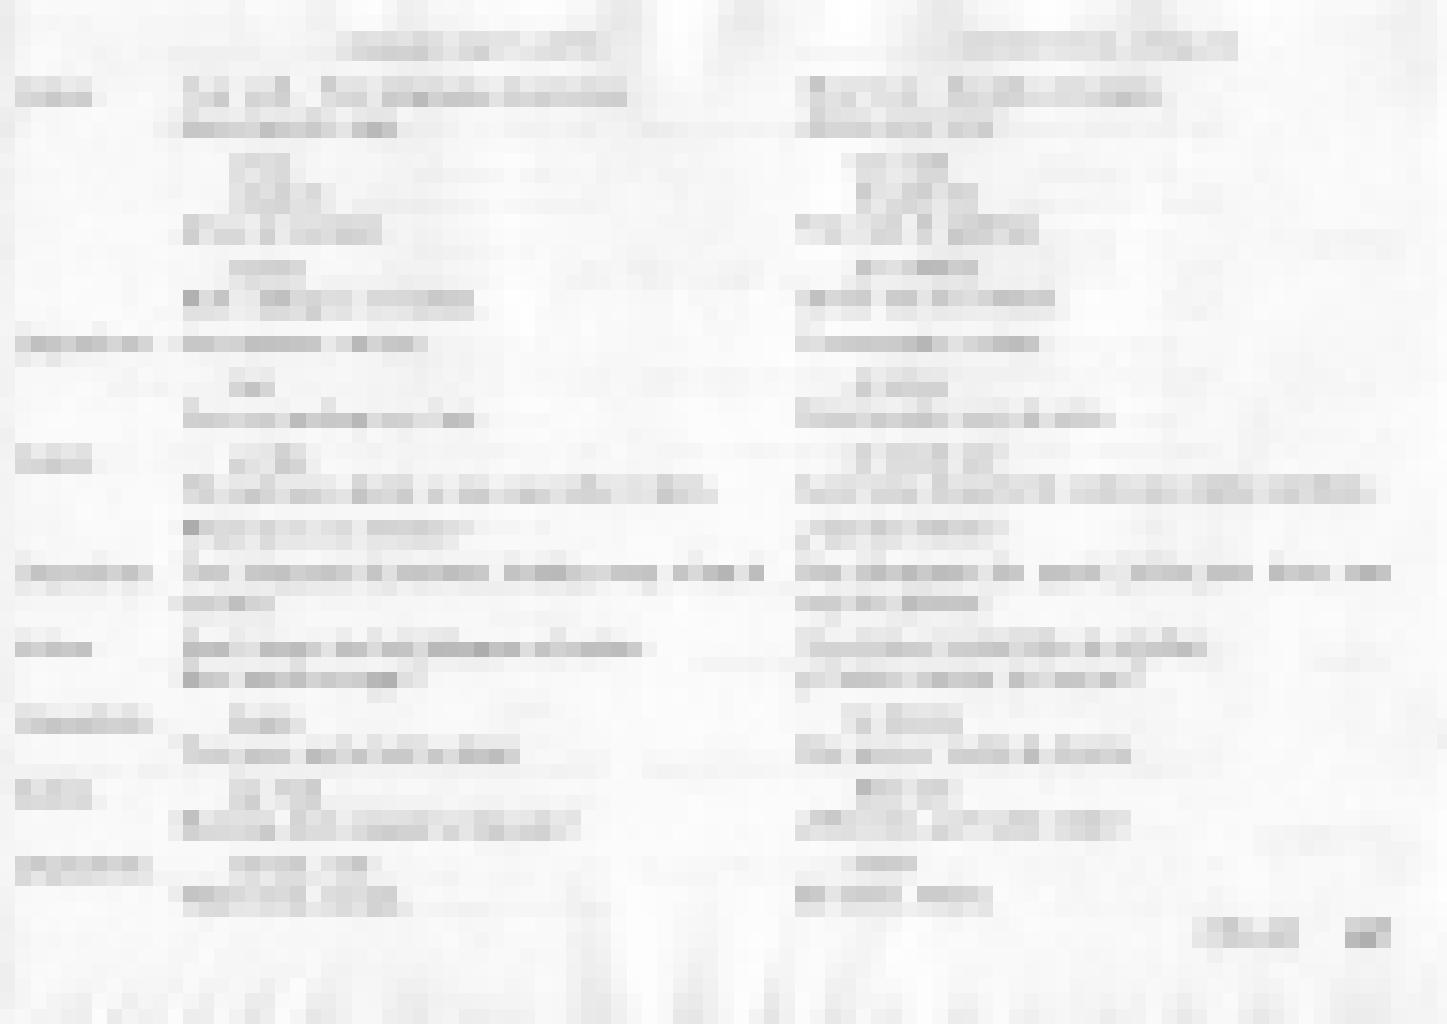

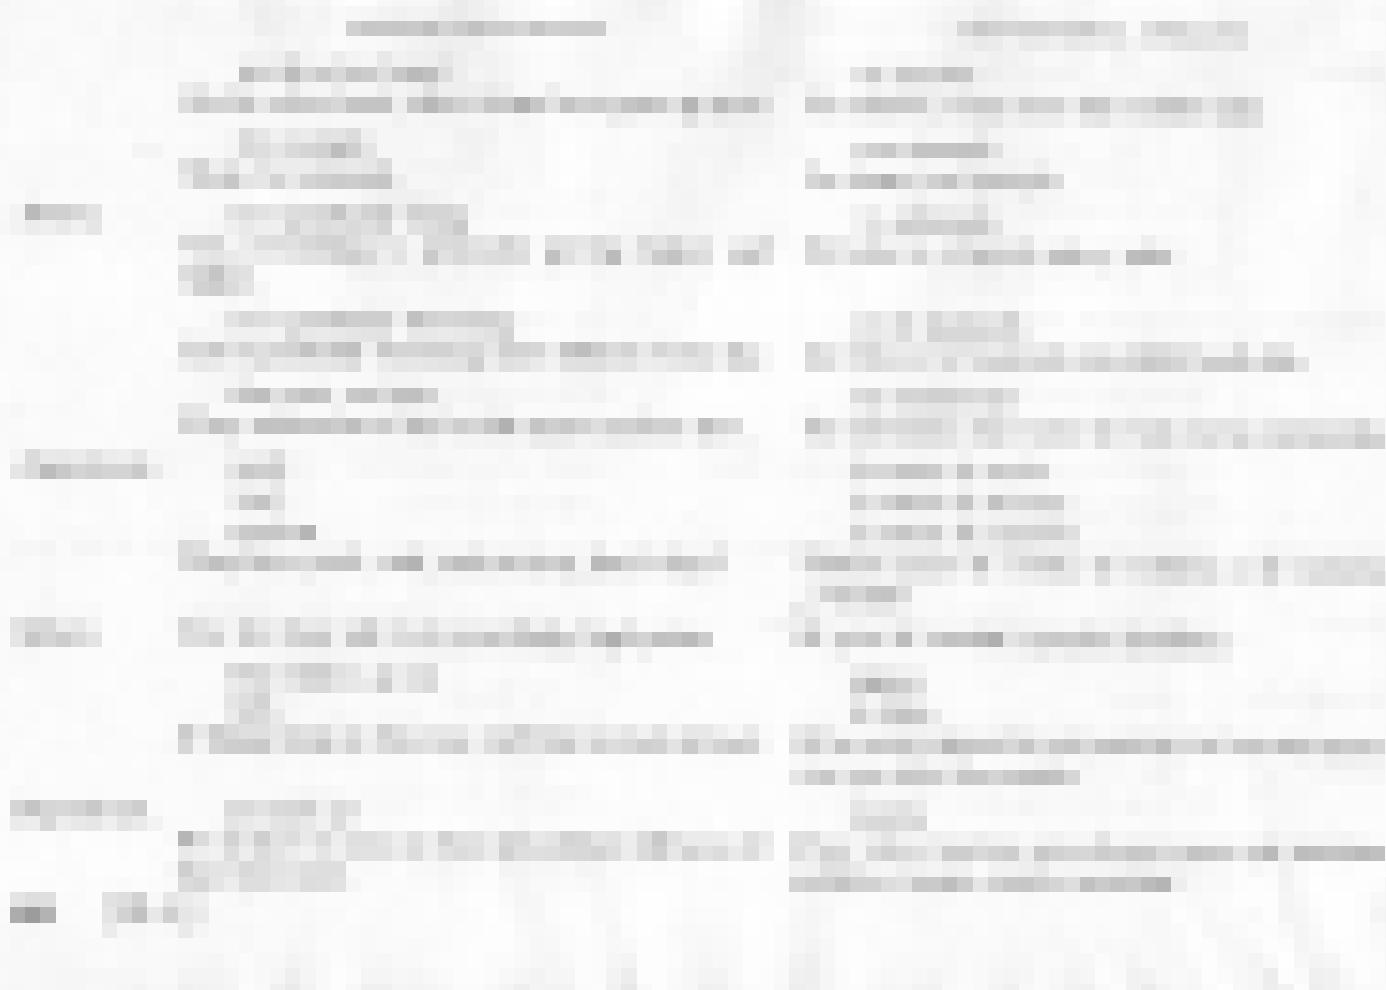

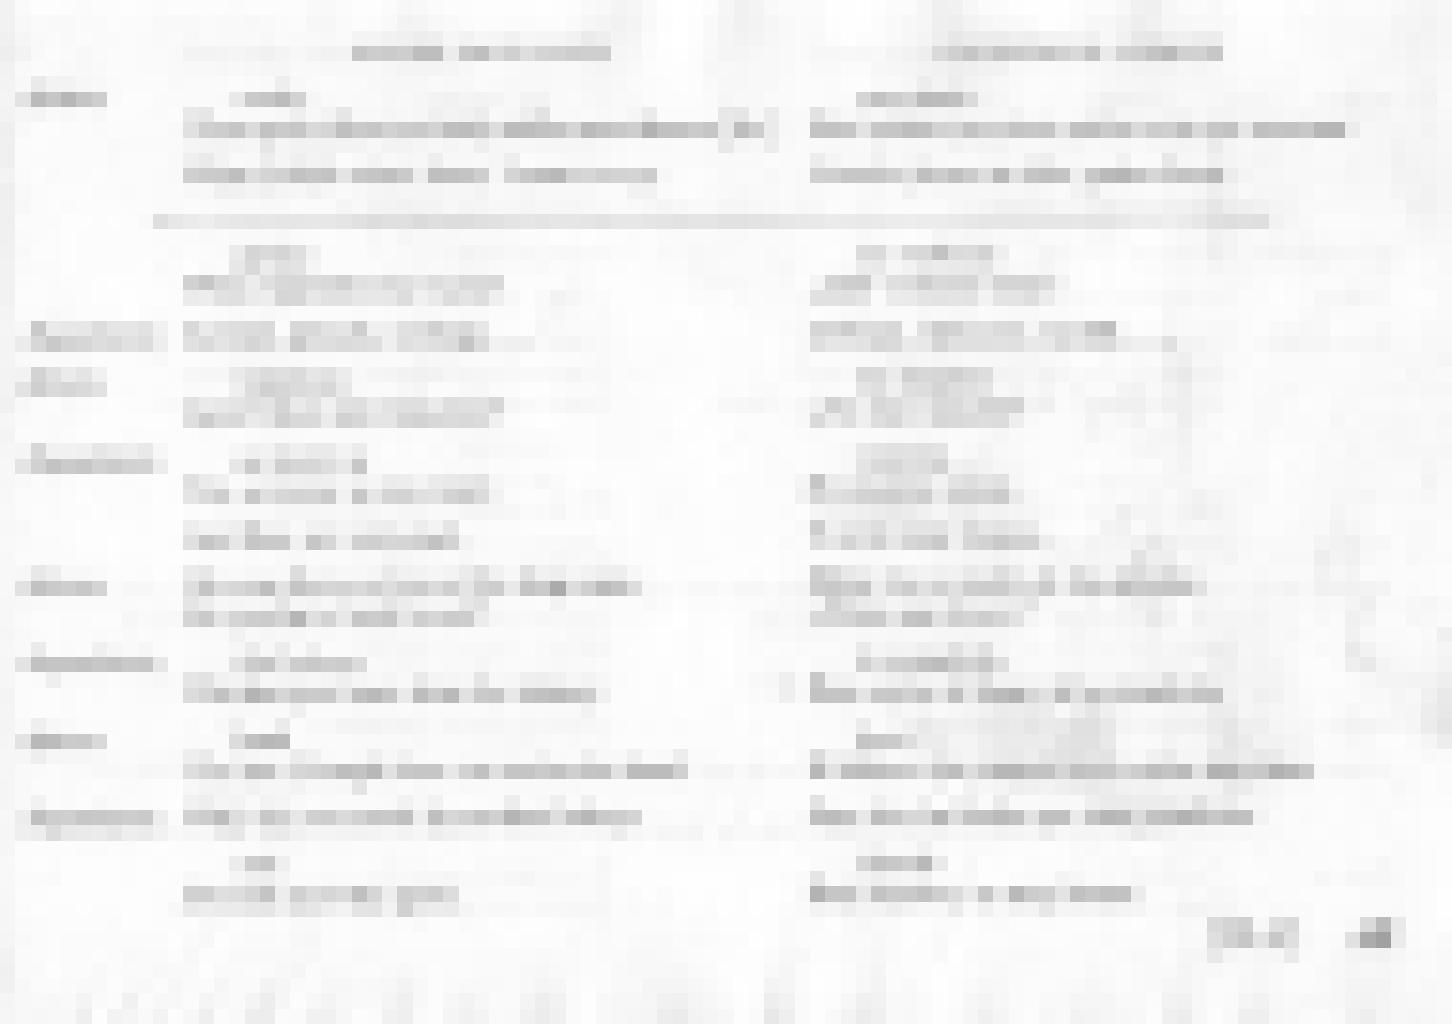

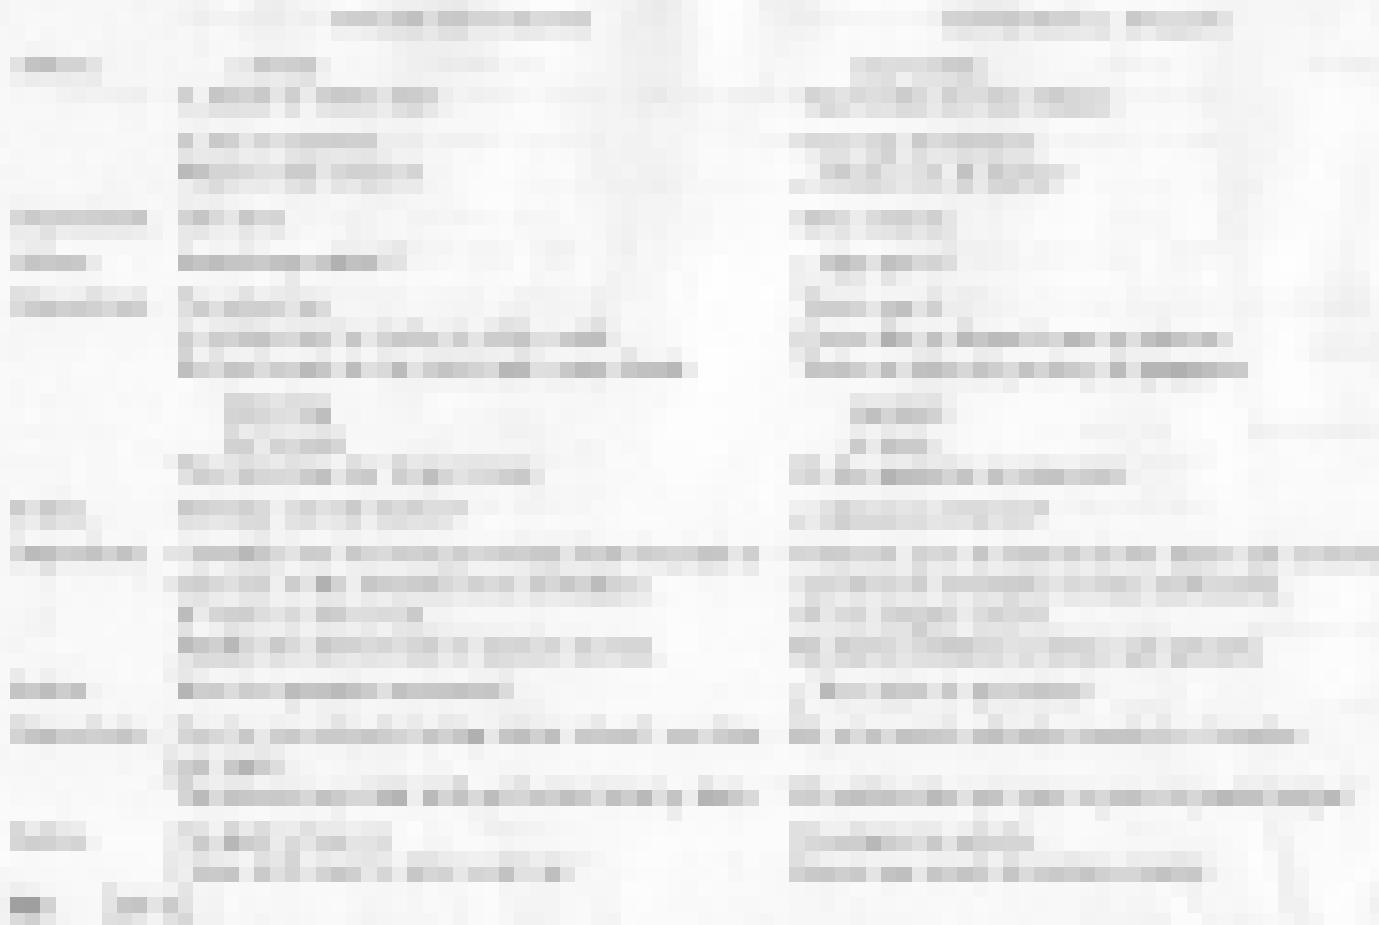

The figure consists of a 2x10 grid of 20 grayscale heatmaps. Each heatmap is a 10x10 grid of gray squares, with darker squares indicating higher feature values. The patterns in the heatmaps are highly correlated with the 10x10 grid of numbers shown in the figure above, suggesting that the heatmaps represent the spatial distribution of the numbers in the grid.

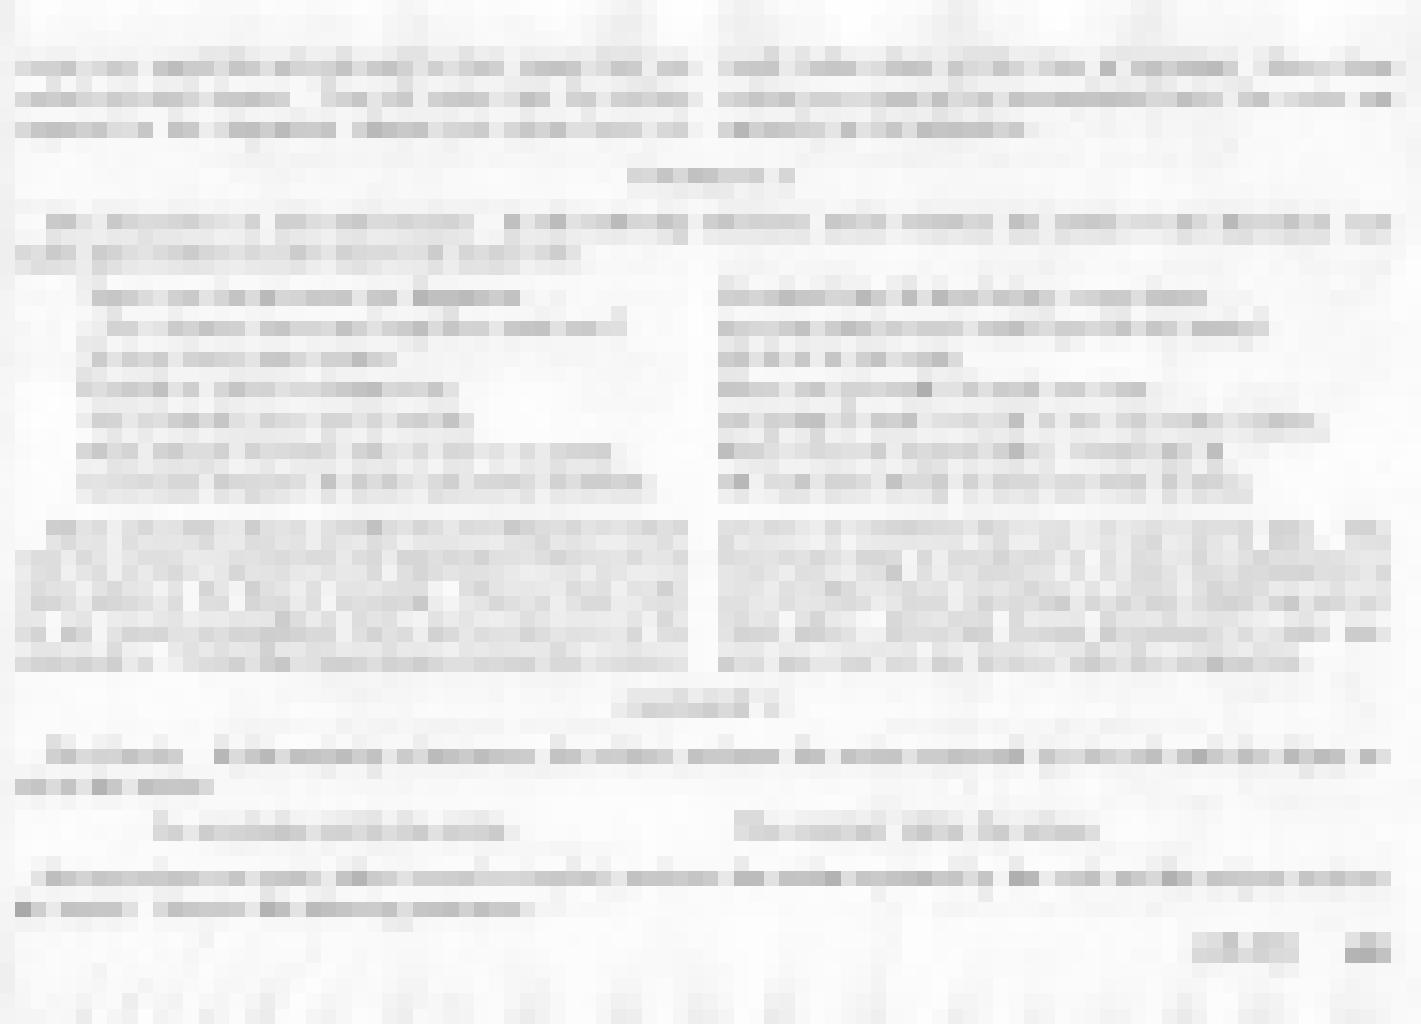

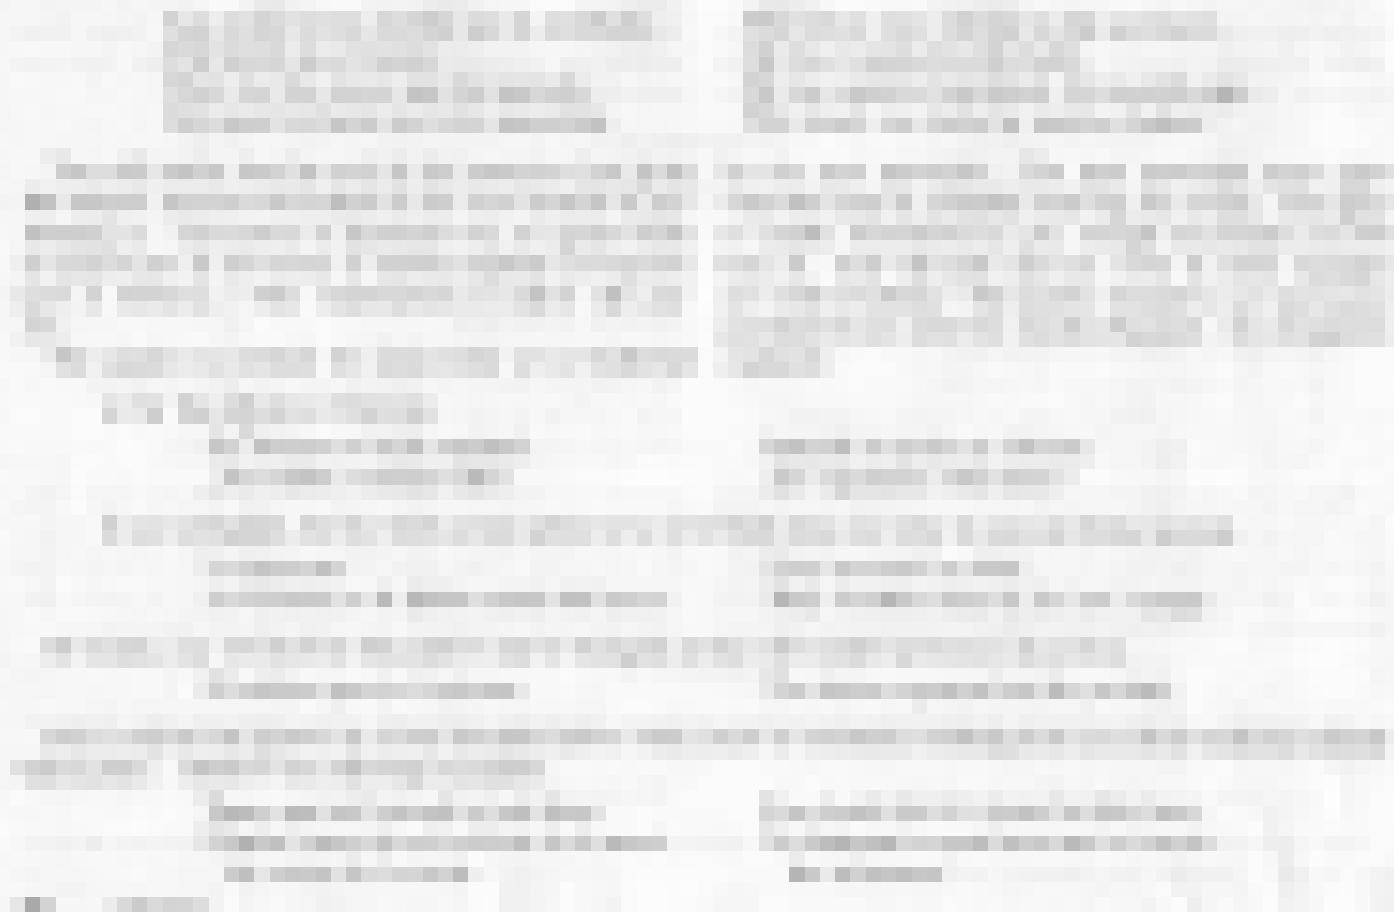

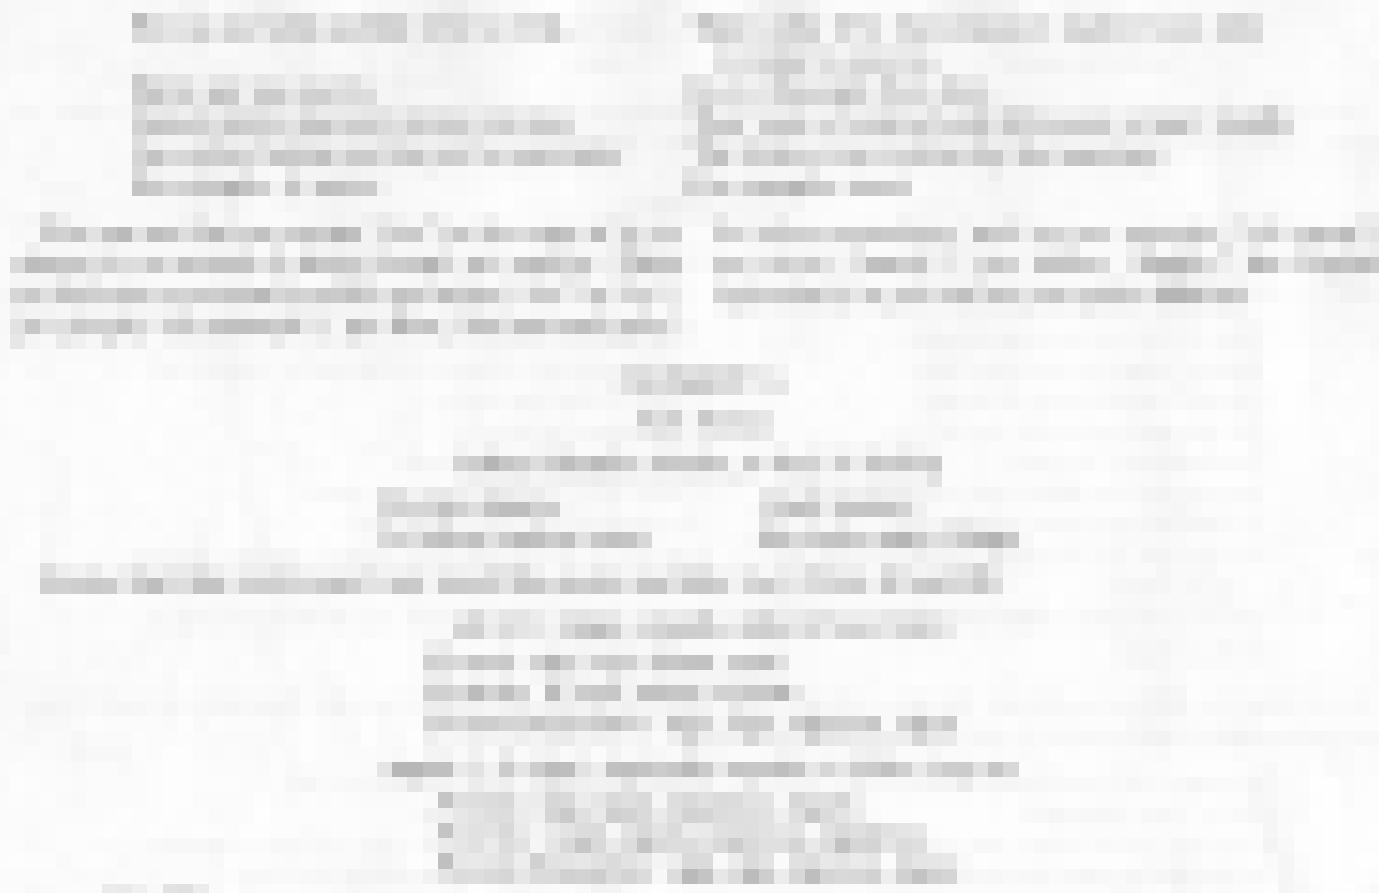

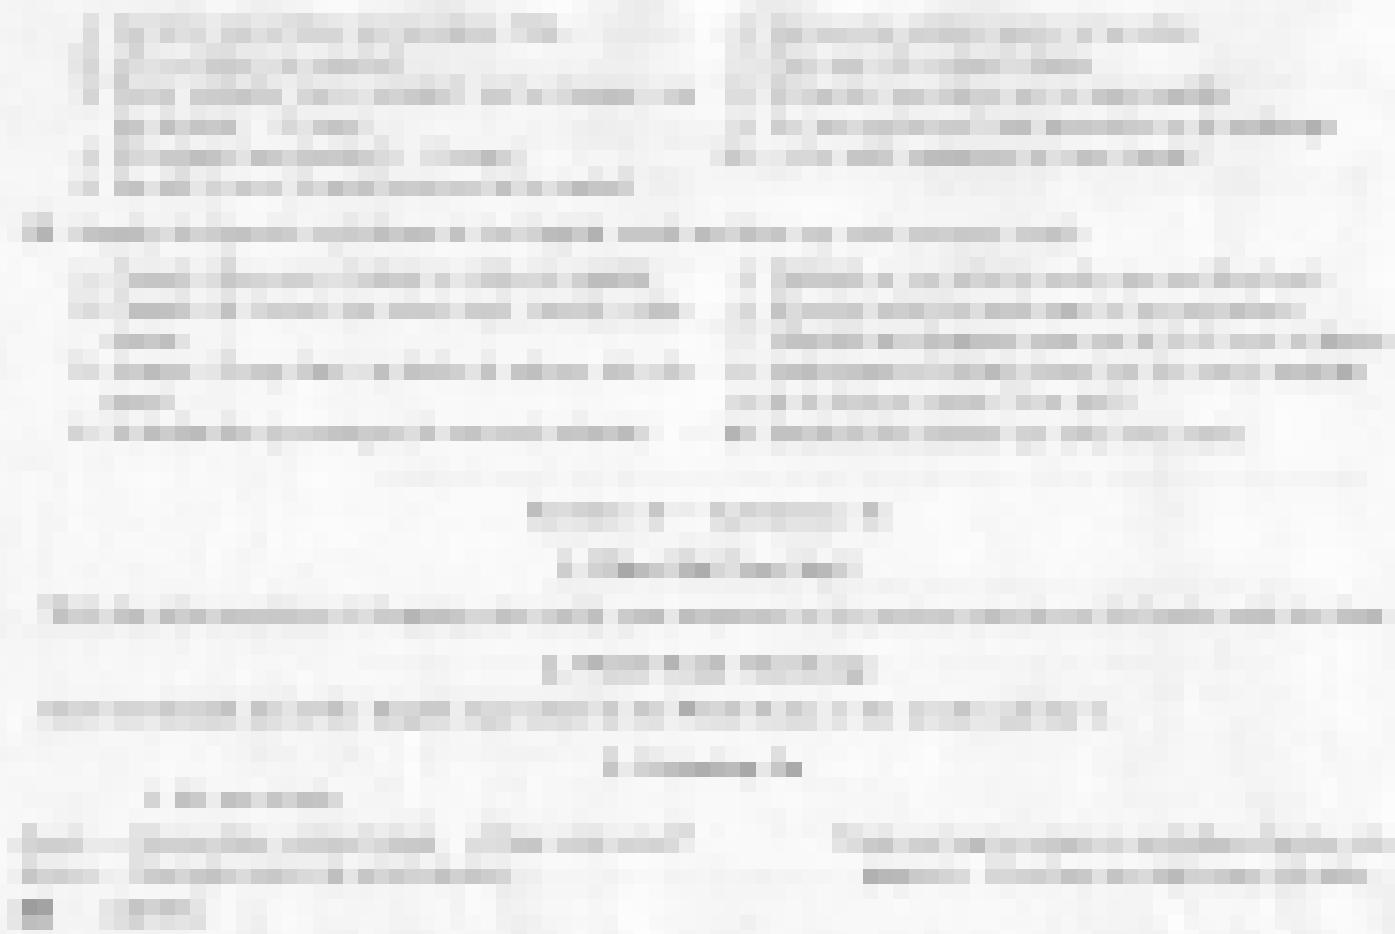

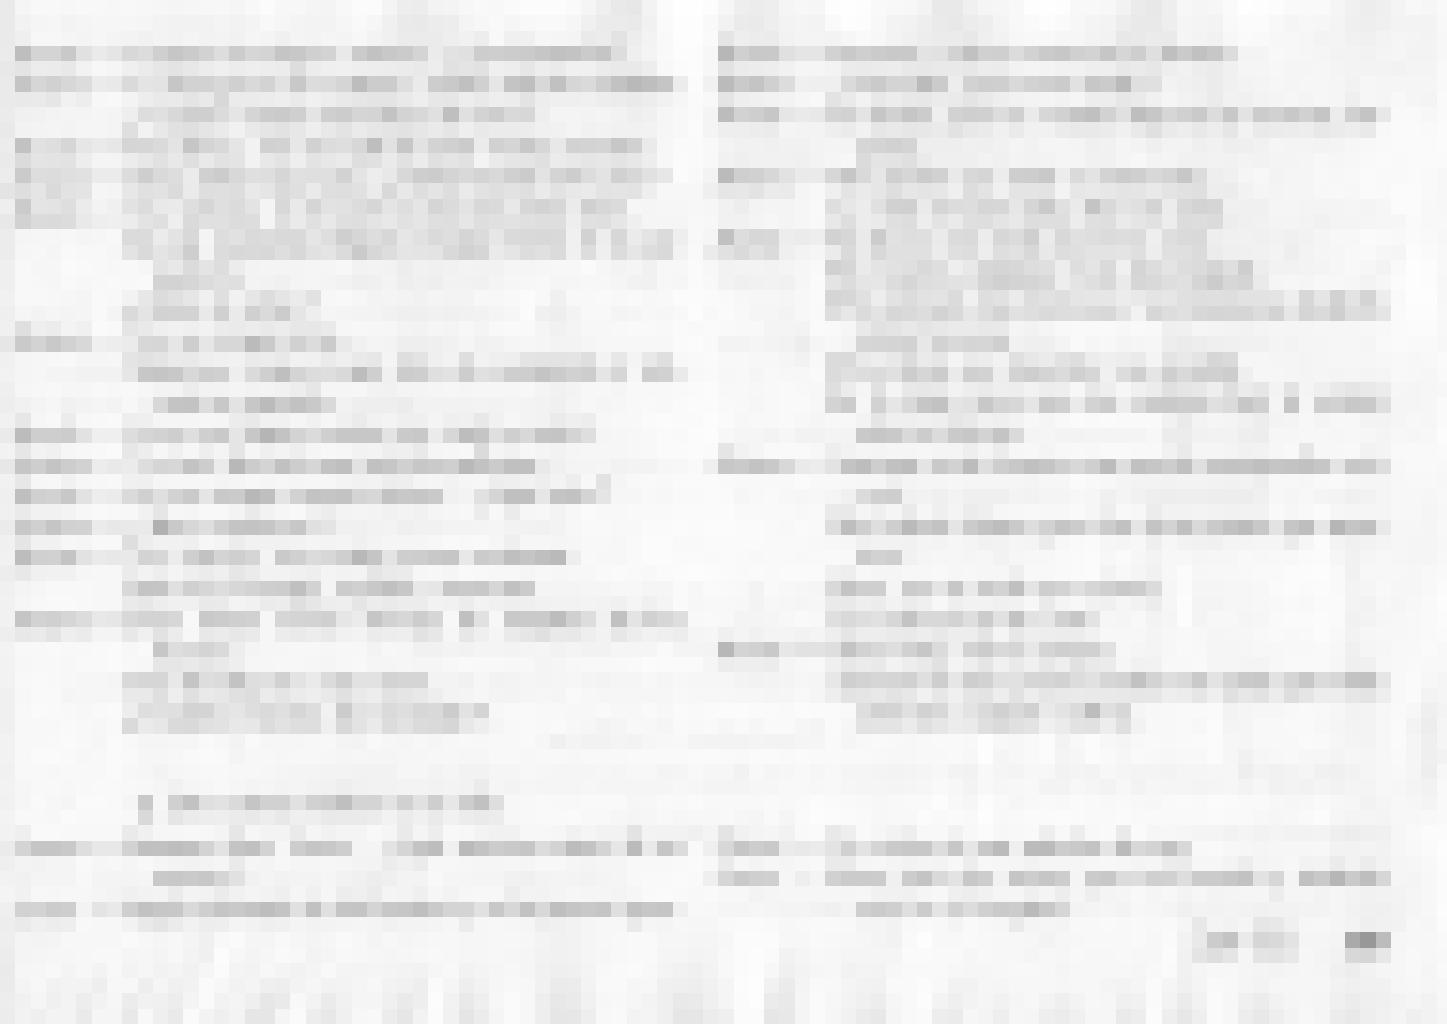

• [View Details](#) • [Edit](#) • [Delete](#)

A grayscale image showing a faint, abstract pattern of horizontal and vertical lines, possibly a watermark or a stylized logo. The pattern is composed of thin, light gray lines on a white background, creating a subtle, textured effect.

1. *Monoclonal antibodies* are antibodies that are produced by a single cell line. They are used to identify specific antigens on the surface of cells. For example, monoclonal antibodies can be used to detect the presence of a particular virus in a sample of blood. They are also used in cancer therapy to target specific cancer cells.

2. *Antibodies* are proteins produced by the immune system to identify and neutralize foreign substances. They are used in medical diagnostics to detect the presence of specific antigens in a sample of blood. They are also used in cancer therapy to target specific cancer cells.

3. *Antibiotic resistance* is the ability of bacteria to withstand the effects of antibiotics. It is a major concern in medicine because it can lead to the development of antibiotic-resistant strains of bacteria. Antibiotic resistance can be reduced by using antibiotics judiciously and by developing new antibiotics.

4. *Antibodies* are proteins produced by the immune system to identify and neutralize foreign substances. They are used in medical diagnostics to detect the presence of specific antigens in a sample of blood. They are also used in cancer therapy to target specific cancer cells.

5. *Antibodies* are proteins produced by the immune system to identify and neutralize foreign substances. They are used in medical diagnostics to detect the presence of specific antigens in a sample of blood. They are also used in cancer therapy to target specific cancer cells.

6. *Antibodies* are proteins produced by the immune system to identify and neutralize foreign substances. They are used in medical diagnostics to detect the presence of specific antigens in a sample of blood. They are also used in cancer therapy to target specific cancer cells.

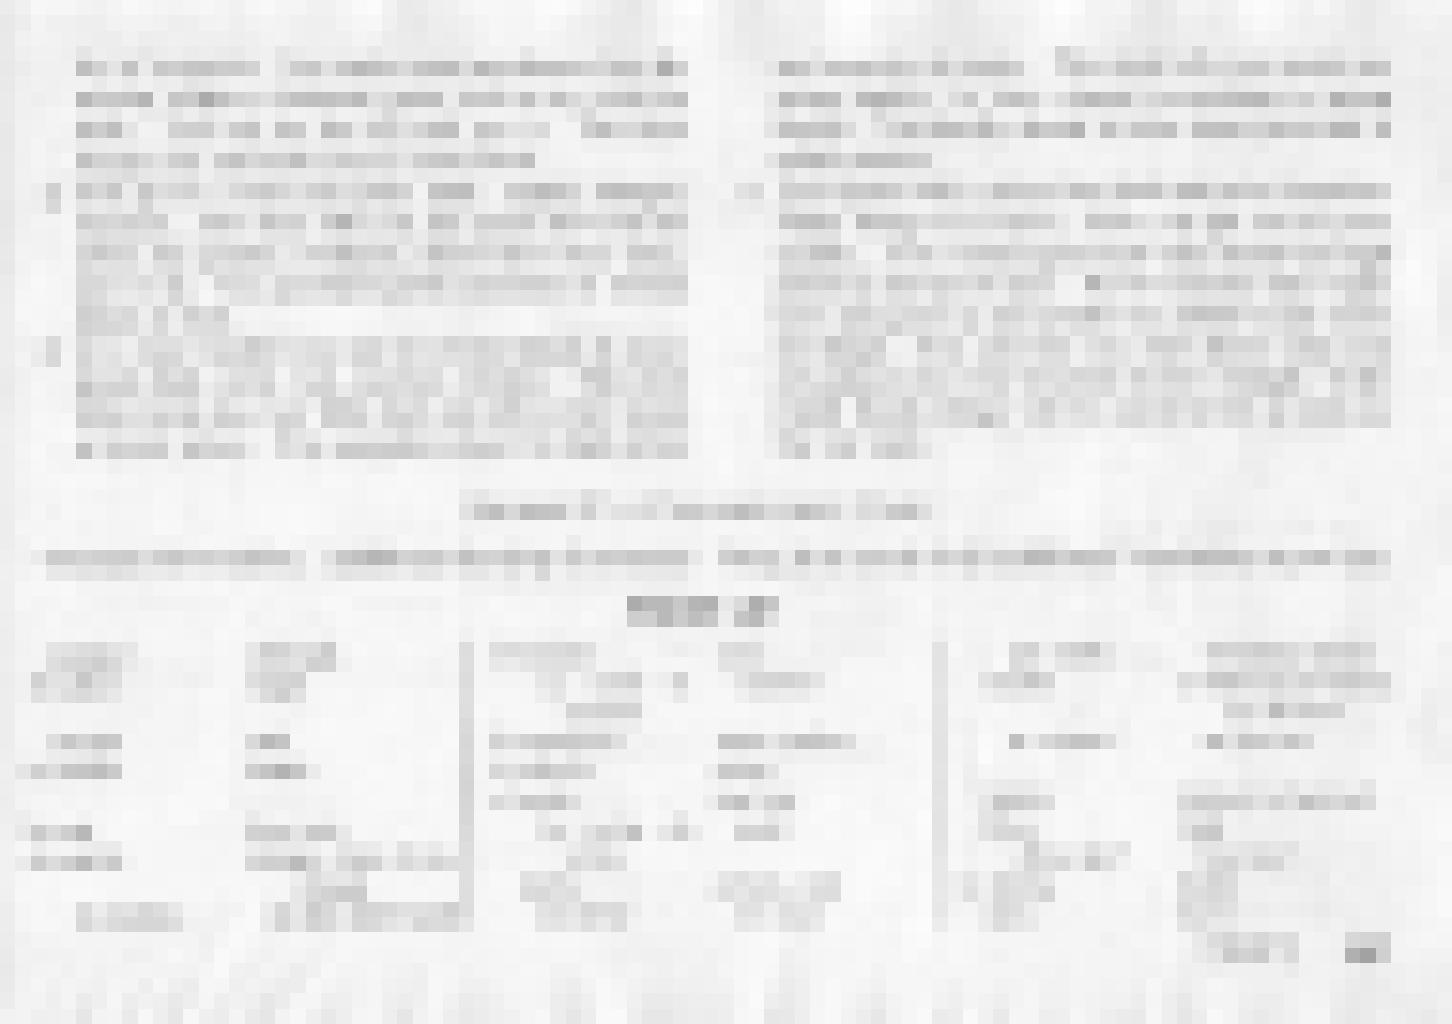

7. *Antibodies* are proteins produced by the immune system to identify and neutralize foreign substances. They are used in medical diagnostics to detect the presence of specific antigens in a sample of blood. They are also used in cancer therapy to target specific cancer cells.

8. *Antibodies* are proteins produced by the immune system to identify and neutralize foreign substances. They are used in medical diagnostics to detect the presence of specific antigens in a sample of blood. They are also used in cancer therapy to target specific cancer cells.

9. *Antibodies* are proteins produced by the immune system to identify and neutralize foreign substances. They are used in medical diagnostics to detect the presence of specific antigens in a sample of blood. They are also used in cancer therapy to target specific cancer cells.

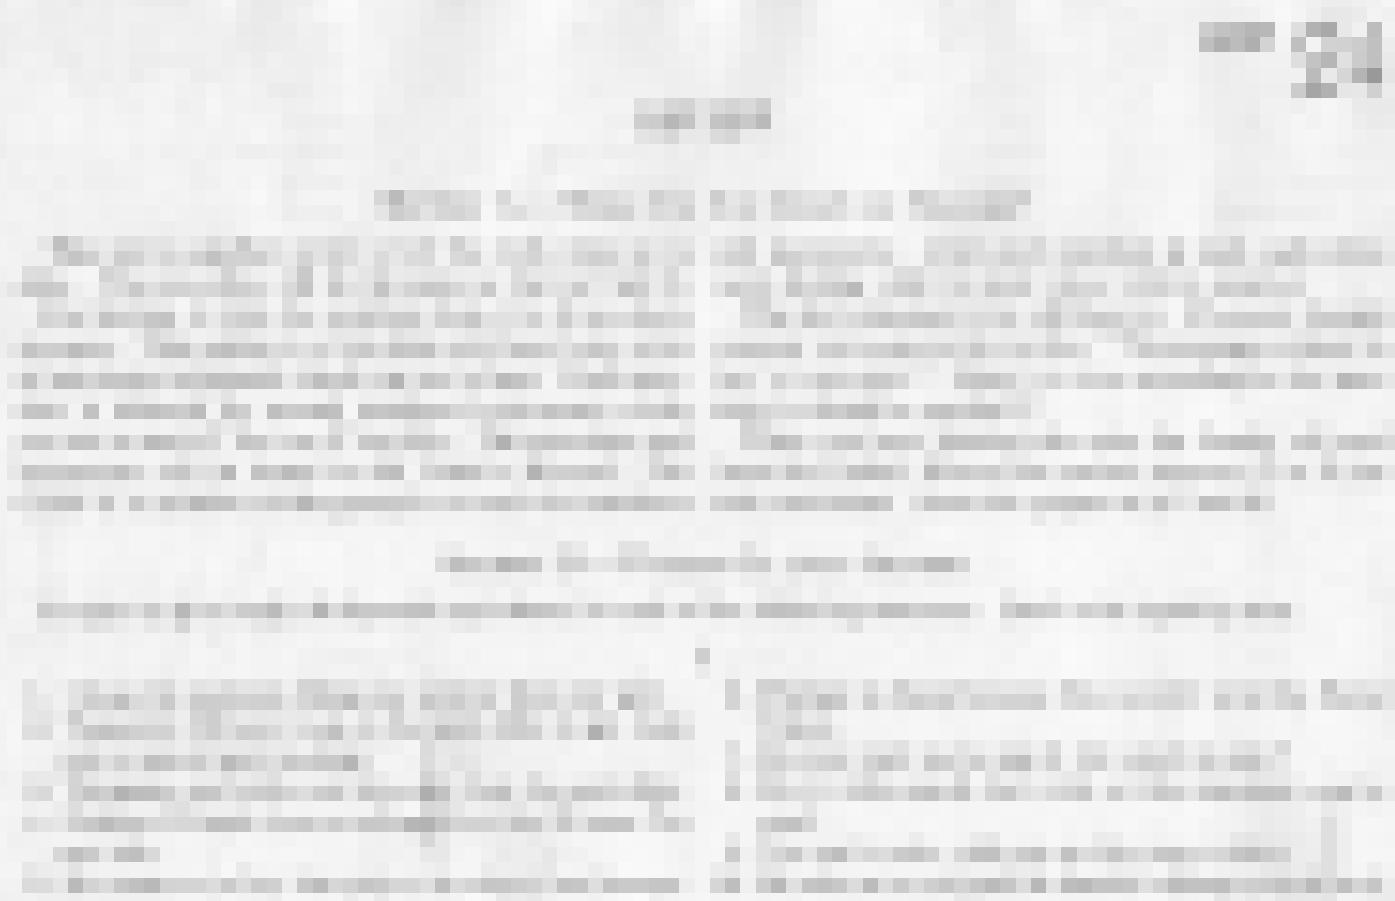

10. *Antibodies* are proteins produced by the immune system to identify and neutralize foreign substances. They are used in medical diagnostics to detect the presence of specific antigens in a sample of blood. They are also used in cancer therapy to target specific cancer cells.

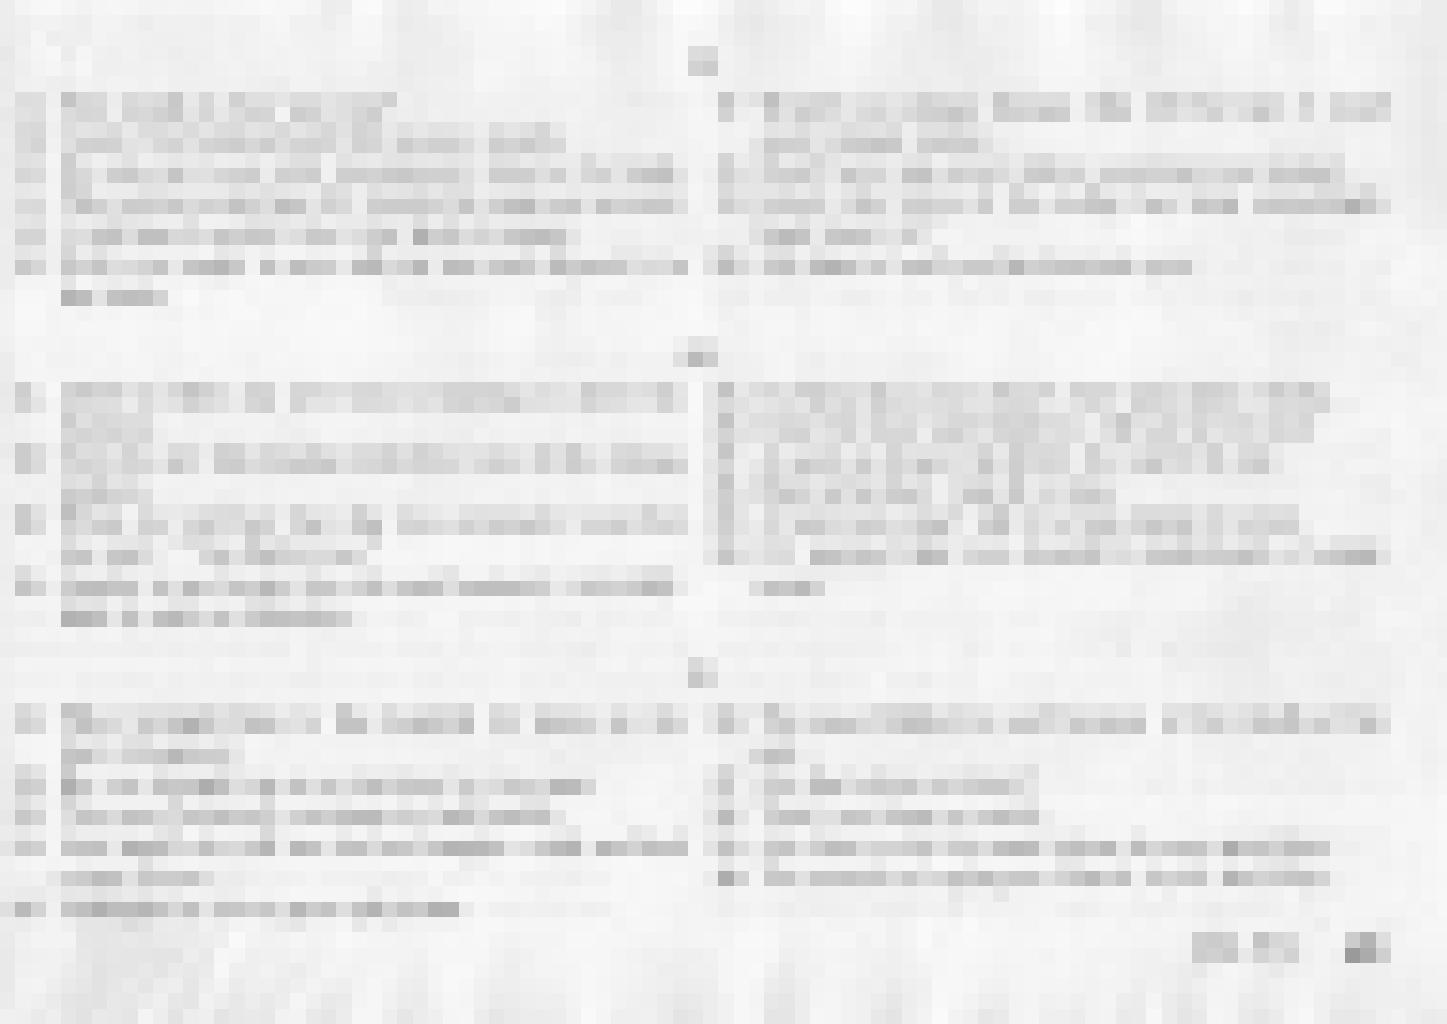

the first time in the history of the world, the people of the United States have been called upon to decide whether they will submit to the law of force, and let a一小部分 of their country be held at the point of a bayonet, or to the law of the Constitution, and let all the States of this Union be free.
